Module Completeness Checklist

RVK Credit & Payment Controls · 3 modules · Odoo 19 Enterprise · repository folder Projects/RVK (not yet under git) · checked 15 October 2026

This is OdooTec's Module Completeness Checklist ("The Anatomy of a Complete Odoo Module"), filled in for the three RVK modules: **odt_customer_credit_control**, **odt_quotation_payment_terms** and **odt_supplier_payment_control**. Every item is marked **Included**, **Not applicable** or **Deferred**, and every deferred item says why. Items checked by the OdooTec standard checker were confirmed by running it on the three modules (two score 100/100; Customer Credit Control scores 87 for three warnings, each with its own row below). Items that need a running Odoo were actually run on 15 October 2026: a fresh install with the 74 automated tests, an upgrade of an installed database, an uninstall and reinstall, and the Arabic interface in right-to-left.

154 items	**103** included	**36** not applicable	**15** deferred, each with a reason

What was run to check it

Check	Result
Automated tests	74 tests (credit control 32, quotation terms 14, supplier payments 28): 0 failed, 0 errors on the fresh database v19_rvk_docs (installed with --test-enable, after the 15 October fix to vendor payments whose payment method has an outstanding account), on the configured client database v19_rvk, and again after the reinstall on v19_rvk_docs_proof.
Standard checker	odt_quotation_payment_terms 100/100, odt_supplier_payment_control 100/100, odt_customer_credit_control 87/100 (0 errors; warnings SCO004, STR004, UX001, see areas 2, 6 and 18). Run with odt_check.py on the three module names, from the repository folder.
Install / upgrade / uninstall	Fresh install on v19_rvk_docs. On its copy v19_rvk_docs_proof: upgrade with no error or warning; uninstall leaving no model, table, column, view, scheduled action or external id; reinstall, all tests passing.
Arabic	ar.po at 100 % for all 3 modules (254 terms: 125 + 40 + 89). Loaded (ar_001) on v19_rvk_docs_proof and checked: credit states, approval statuses, menus, groups and company fields in Arabic; quotation and company form laid out right to left. The User Manual itself is in English.

Deferred items, and why

Area	Item	Reason
Repository and directory hygiene	Checker STR004 on Customer Credit Control	Not a git repository yet, so the checker reads the parent Odoo source tree's .gitignore. Clears once the folder is a git repository; its own .gitignore passes the rule.
Repository and directory hygiene	Private repository for proprietary work	Not under git yet; the folder is to be made a git repository and pushed to a private OdooTec remote.
Views and user interface	Checker UX001 on credit.decision	credit.decision is the dialog in which Finance confirms a credit decision and its reason. A dialog is never listed or searched, so no list or search view is planned; the warning is kept visible here instead of adding unused views.
Views and user interface	Kanban / pivot / graph / calendar / map where the data fits	Credit Exposure is a list (with progress bar and totals); a pivot or graph view is not added in this first release.
Views and user interface	Filter labels say what they do	The Credit Exposure filter *Over Cap* lists every customer that has a cap, not only those above it. To be corrected or renamed.
Translation	Gaps in Odoo core translations reported	On the Arabic quotation, the label "VAT Total Amount" stays English. It comes from Odoo's Saudi localization, not these modules; not reported yet.
Install, upgrade, uninstall	migrations/ with version-numbered scripts	First release (19.0.1.0.0): there is no earlier installed version to migrate from.
Documentation	User guide in every delivery language	The User Manual is in English; an Arabic edition is not written yet (the interface itself is fully Arabic).
Licensing and legal	Written licence agreement as a schedule to the contract	Handled with the client contract by OdooTec sales/legal, outside the code.
Data and architecture	Time zones for date / datetime	Credit months follow the UTC date of confirmation, so an order confirmed in the first hours of a month (local time) counts in the month before. Kept for the first release (README Known Limitations).
Data and architecture	10x demo volume considered	Not load-tested. Credit Exposure is a SQL view computed on every read; to be measured with production-size data.
Data and architecture	Concurrency: no single-user assumption	The ceiling check takes no lock: two orders confirmed at the same moment are each checked without the other.
Data and architecture	Checker SCO004 on Customer Credit Control	Extends Sales, Inventory and Accounting as one credit policy; splitting it into bridge modules is a design decision for the SDD.
Code quality	Readable commit history	The folder is not a git repository yet; history starts with the first commit.
Delivery and operations	Backup / restore path understood	Depends on the client's hosting (to be confirmed with them).

1. Manifest and identity

Item	Status	Where / why
name: human-readable English, no version or client name	Included	Customer Credit Control, Quotation Payment Terms, Supplier Payment Control (MAN007).
summary: one line	Included	All 3 (MAN008).
description (or static/description/index.html)	Included	RST description with key capabilities in every manifest.
version 19.0.x.y.z	Included	19.0.1.0.0 on all 3 (MAN004).
category: an existing one	Included	Sales/Sales (two) and Accounting/Accounting (MAN010).
author / maintainer	Included	OdooTec on all 3 (MAN005).
website resolvable and correct	Included	https://www.odootec.com (MAN006).
license consciously chosen	Included	"Other proprietary" with the ODTL-1 v1.4 LICENSE in every module.
application explicit; installable True	Included	application False on all 3 (they extend Sales and Accounting); all installable.
auto_install only for genuine bridges	Not applicable	No module is auto-installed; there is no bridge module.
depends minimal and justified	Included	Each README has a Dependencies table with the reason for every module.
external_dependencies declared	Not applicable	No external Python packages are used.
data ordered so referenced records load first	Included	XML023 clean; fresh install, upgrade and reinstall verified.
demo separated from structural data	Not applicable	No module ships demo data (see area 5).
assets declared in the manifest	Not applicable	No JavaScript, SCSS or other web assets.
hooks where install/uninstall needs logic	Not applicable	Not needed: field defaults cover existing records, and the uninstall run left nothing behind.
images banner	Not applicable	Not published on the App Store; delivered privately.
price / currency	Not applicable	Not sold on the App Store.

2. Repository and directory hygiene

Item	Status	Where / why
Conventional layout	Included	models/, views/, security/, wizard/, data/, tests/, i18n/ (NAM004 / NAM005 clean).
__init__.py at every level, in dependency order	Included	STR001 / STR002 clean.
LICENSE present	Included	ODTL-1 v1.4 in every module.
README.md at module root	Included	Every module, house structure (DOC001 / DOC004).
.gitignore	Included	Repository .gitignore at the root covers __pycache__/, *.py[cod] and editor files.
Checker STR004 on Customer Credit Control	Deferred	Not a git repository yet, so the checker reads the parent Odoo source tree's .gitignore. Clears once the folder is a git repository; its own .gitignore passes the rule.
No compiled artefacts, backups or client data	Included	STR003 clean; sample data in the manual is invented.
Private repository for proprietary work	Deferred	Not under git yet; the folder is to be made a git repository and pushed to a private OdooTec remote.

3. Models layer

Item	Status	Where / why
Models named after the business object, no odt. prefix	Included	credit.exposure, credit.decision, payment.approval (NAM015).
_description on every model	Included	PY005 clean.
_order / _rec_name where they matter	Included	credit.exposure (month, credit sales) and payment.approval (date) set both.
_inherit vs _inherits chosen deliberately	Included	Only _inherit: every rule is added to the record that owns the data.
Explicit string labels	Included	PY022 clean.
help on non-obvious fields	Included	PY024 clean; every new field has a help text.
required / readonly / index / copy / tracking set consciously	Included	Credit state and approvals copy=False and tracked; approval records read-only.
ondelete on every Many2one	Included	PY023 clean (approvers restrict, payment approvals cascade).
Computes with complete @api.depends; store only where justified	Included	Approval status and duplicate link stored for lists and filters; the credit share is computed on read.

Item	Status	Where / why
Related fields instead of duplicated data	**Included**	Special mark on sales and purchase lines, customer cap on the order, amount and vendor on approvals.
@api.constrains for rules, models.Constraint for uniqueness	**Included**	Advance 0-100 %, rising thresholds, blocked customers, shareholder accounts; no uniqueness rule is needed.
@api.onchange for assistance only	**Included**	No onchange is used; every rule is a constraint or a check in the action.
Defaults via default=	**Included**	Credit state Normal, hold days 60, approval Not Needed.
Display name via _compute_display_name where needed	**Included**	_rec_name is enough for the two new models (PY019 clean).
Docstrings on non-trivial methods	**Included**	PY002-PY004 clean.
No hard-coded ids	**Included**	PY025 clean.
No hard-coded account codes, tax codes or currency	**Included**	PY026 clean; payroll accounts are marked by the user, amounts use the company currency.
Logging through getLogger, no print	**Included**	PY010 / PY014 clean.

4. Structural data

Item	Status	Where / why
Stable, descriptive external ids	**Included**	XML034 and NAM006-NAM010 clean.
noupdate="1" on client-modifiable records	**Included**	Both scheduled actions are noupdate (XML040).
Nothing depending on a specific fiscal localization	**Included**	No country-specific data or rule; tested on a Saudi chart of accounts.
Sequences in data	**Not applicable**	No new numbered document.
Server / automated actions as data	**Not applicable**	No server actions are needed.
Crons with realistic intervals	**Included**	Credit Control: nightly credit check (daily, 00:30) and weekly watch-list email (weekly).
Default parameters via ir.config_parameter	**Not applicable**	Every option is per company, stored on the company (see area 11).
Mail templates, activity types, stages where needed	**Included**	None needed: the weekly email is built by the scheduled action; approvals and releases are logged in the chatter.

5. Demo data

Item	Status	Where / why
Only in the demo key	**Not applicable**	No demo data is shipped: the modules add rules to existing records.
Realistic, domain-appropriate data	**Not applicable**	No demo data; the tests create their own records.
Generated by a committed script at volume	**Not applicable**	No demo data. The manual's sample data comes from a separate script kept with the documentation.
Never referenced by structural data or code	**Included**	XML039 clean.
In-app loader considered	**Not applicable**	No demo data.

6. Views and user interface

Item	Status	Where / why
List, form and search for every user-facing model	**Included**	credit.exposure and payment.approval have all three.
Checker UX001 on credit.decision	**Deferred**	credit.decision is the dialog in which Finance confirms a credit decision and its reason. A dialog is never listed or searched, so no list or search view is planned; the warning is kept visible here instead of adding unused views.
Kanban / pivot / graph / calendar / map where the data fits	**Deferred**	Credit Exposure is a list (with progress bar and totals); a pivot or graph view is not added in this first release.
Search view with filters and group-bys	**Included**	Credit Exposure (This Month, by month, company, customer), contacts (Credit Watch List, Credit Hold or Block), payments (To Approve, Blocked Duplicates), approvals (by level, approver).
Filter labels say what they do	**Deferred**	The Credit Exposure filter *Over Cap* lists every customer that has a cap, not only those above it. To be corrected or renamed.
Statusbar, smart buttons, ribbons	**Included**	Coloured credit state and approval badges, red banners while an approval waits, an Approved ribbon on payments.
Deliberate widgets	**Included**	badge, progressbar, many2many_tags, many2one_avatar_user, web_ribbon.
Conditional invisible / readonly / required	**Included**	Buttons shown only to the right group and state; Excluded from Credit Totals only on special items (XML005 / XML036 clean).
Placeholders and empty-state messages	**Included**	Empty Credit Exposure and Payment Approvals have messages; the decision reason has a placeholder.

Item	Status	Where / why
Menus with sequences and correct parent	Included	Sales → Reporting → Credit Exposure; Accounting → Vendors → Payment Approvals (UX003 / XML022 clean).
Actions with help	Included	UX002 clean.
Resilient xpath inheritance	Included	XML027 / XML028 clean.
RTL layout verified for Arabic	Included	Checked in Arabic on 15 Oct 2026 on v19_rvk_docs_proof: quotation with its approval banner, company Credit Control tab.

7. Security (non-negotiable)

Item	Status	Where / why
Groups with a privilege / category	Included	Quotation Approval / Quotation Send Approver; Vendor Payment Approval / Payment approver (Operations), (Chief Executive) (SEC007 clean). Credit control uses Odoo's Accounting groups.
ACL for every model, transient included	Included	SEC001 / SEC006 clean, including the credit.decision dialog.
Record rules, global and per group	Included	credit.exposure and payment.approval are limited to the user's companies.
Multi-company rules where supported	Included	Both rules use company_ids; ceilings and thresholds are per company.
Field-level groups for sensitive fields	Included	The cap and the company Credit Control tab are for the Finance Manager; credit fields also refuse writes from anyone else.
Menus and actions tied to groups	Included	Credit Exposure for sales users and Finance Managers; Payment Approvals for accountants and the approvers; each button for its group.
sudo() sparing, each use justified	Included	PY034 clean: every sudo() follows a rights check and has a comment.
Tested as a restricted user	Included	Salesperson, Sales Manager, Finance user, approvers and non-administrators are tested (TST005).

8. Translation

Item	Status	Where / why
.pot generated and committed	Included	One per module (I18N001 / I18N007).
.po per target language, 100 % of the module's terms	Included	ar.po 100 % for all 3 modules, 254 terms.
Every user-facing string wrapped	Included	PY006-PY009 / PY033 clean, including errors and the weekly email.
Translatable data fields populated	Included	Menus, groups and selection values load in Arabic (checked on the proof copy).
Verified in the running interface	Included	Arabic loaded on v19_rvk_docs_proof and checked in the interface on 15 Oct 2026.
Gaps in Odoo core translations reported	Deferred	On the Arabic quotation, the label "VAT Total Amount" stays English. It comes from Odoo's Saudi localization, not these modules; not reported yet.

9. Reports and documents

Item	Status	Where / why
QWeb templates where there is printable output	Not applicable	No printed documents: the modules add checks and approvals to existing screens. The weekly watch-list email is the only message they send.
Paper format if non-standard	Not applicable	No reports.
Report action bound to the model, sensible filename	Not applicable	No reports.
Translated templates	Not applicable	No reports.
RTL and fonts verified for Arabic	Not applicable	No reports.

10. Wizards and user actions

Item	Status	Where / why
TransientModel for input gathering	Included	credit.decision collects the reason for every credit decision (PY035 clean).
Confirmation before destructive actions	Included	Absolute Block and Release Duplicate ask for confirmation; every credit decision needs a reason (UX004 clean).
Progress / result feedback on long actions	Included	Confirming over a limit shows a "Credit approval needed" notification naming the orders; payment approvals and duplicate releases post a chatter note.
Idempotent actions	Included	Approving twice, approving what needs no approval, lifting a hold that is not there or releasing a released duplicate is refused with a message that names the record.

11. Settings integration

Item	Status	Where / why
res.config.settings where there are options	Not applicable	All options are per company and live on the company form (Credit Control and Payment Approval tabs), not in Settings.
Grouped under a clear block	Included	Credit Control tab (ceiling, hold days, special items minimum advance) and Payment Approval tab (three thresholds).
Backed by config_parameter or company fields	Included	Company fields (SET001 clean).
Help on every setting	Included	Every company field has a help text (PY024).

12. Front-end assets

Item	Status	Where / why
Declared in manifest assets	Not applicable	No front-end assets.
OWL, not legacy widgets	Not applicable	Standard Odoo widgets only.
SCSS variables, not hard-coded colours	Not applicable	No SCSS.
No jQuery	Not applicable	No JavaScript.
Right bundle	Not applicable	No assets.

13. Controllers and portal

Item	Status	Where / why
Controllers where routes are exposed	Not applicable	No routes, no portal or website pages.
auth set explicitly and correctly	Not applicable	No controllers.
CSRF considered on POST	Not applicable	No controllers.
Portal templates and breadcrumbs	Not applicable	No portal.
Rate limiting and input validation on public endpoints	Not applicable	No public endpoints.

14. Tests (non-negotiable)

Item	Status	Where / why
Tests under tests/, discovered by convention	Included	All 3 modules (TST001 / TST002 clean).
TransactionCase for logic, HttpCase for controllers	Included	TransactionCase throughout; there are no controllers.
Tagged for the right CI phase	Included	post_install, -at_install and the module name (TST003).
Core business rule covered	Included	Cap and ceiling with boundaries, credit states, the 60/61-day hold, send checks, approval levels, duplicates, matched bills.
Every override: negative, normal and standard-preserved	Included	tests/test_overrides.py in each module, including the 15 Oct fix.
Security covered as a restricted user	Included	TST005 clean.
Tests that can actually fail	Included	TST004 clean; tests assert refusals, states and amounts.
Demo data only, never client data	Included	Tests create their own records.

15. Install, upgrade, uninstall

Item	Status	Where / why
pre_init_hook prerequisite checks	Not applicable	Nothing to check before install.
post_init_hook for setup data	Not applicable	Field defaults set every existing customer to Normal and every order to Not Needed.
uninstall_hook, honest about undeletable records	Not applicable	Not needed: the uninstall run on 15 Oct 2026 left nothing behind.
migrations/ with version-numbered scripts	Deferred	First release (19.0.1.0.0): there is no earlier installed version to migrate from.
Verified on upgrade, not only fresh install	Included	The three modules upgraded on v19_rvk_docs_proof without an error or warning (15 Oct 2026).
noupdate where updates must not overwrite client changes	Included	XML040 clean.

16. Documentation

Item	Status	Where / why
README.md: what it does, dependencies, install, limitations	Included	Every module (DOC001 / DOC004).
doc/index.rst	Not applicable	Optional, for the App Store only.
static/description/index.html for a buyer	Not applicable	Not applications and not published on the App Store.
Designed icon.png	Included	All 3 (MAN016).
Screenshots	Included	In the User Manual, taken from the running demo database.
User guide in every delivery language	Deferred	The User Manual is in English; an Arabic edition is not written yet (the interface itself is fully Arabic).
Technical note on design decisions and constraints	Included	Technical Overview (2 pages).
CHANGELOG.md	Not applicable	Not used: OdooTec modules ship no CHANGELOG (house decision); history will live in git.
Inline help on fields	Included	PY024 clean.

17. Licensing and legal

Item	Status	Where / why
Manifest license matches the instrument	Included	MAN003 / LIC008 clean.
LICENSE present and matching	Included	ODTL-1 v1.4, verbatim, in all 3 (LIC001 / LIC002 / LIC005).
Copyright headers	Included	LIC003 clean.
Written licence agreement as a schedule to the contract	Deferred	Handled with the client contract by OdooTec sales/legal, outside the code.
Stated: protection is contractual, not technical	Included	Stated in every README's Licensing & Terms section.

18. Data and architecture

Item	Status	Where / why
Multi-company decided	Included	Ceiling, hold days, minimum advance and thresholds per company; credit totals and approvals per company with record rules.
company_id with matching rules where multi-company	Included	SEC005 clean.
Multi-currency decided; no assumed currency	Included	Order totals converted at the order's rate and payments at the payment date, into the company currency (PY026 / PY027).
Time zones for date / datetime	Deferred	Credit months follow the UTC date of confirmation, so an order confirmed in the first hours of a month (local time) counts in the month before. Kept for the first release (README Known Limitations).
Indexes on searched fields; no search in loops	Included	Index on confirmed orders by company and date, on the duplicate link and on approvals (PY029 clean).
10x demo volume considered	Deferred	Not load-tested. Credit Exposure is a SQL view computed on every read; to be measured with production-size data.
Concurrency: no single-user assumption	Deferred	The ceiling check takes no lock: two orders confirmed at the same moment are each checked without the other.
Dashboard stores no business data	Included	Credit Exposure is a read-only SQL view and stores nothing.
Checker SCO004 on Customer Credit Control	Deferred	Extends Sales, Inventory and Accounting as one credit policy; splitting it into bridge modules is a design decision for the SDD.

19. Code quality

Item	Status	Where / why
Odoo naming	Included	NAM rules clean, including file names after their models.
Linted; no unused imports or dead code	Included	black formatting and PY001 / PY030 / STR002 clean.
No debugging leftovers	Included	PY010 / PY031 clean.
No secrets or client-identifying data	Included	PY032 clean.
Readable commit history	Deferred	The folder is not a git repository yet; history starts with the first commit.

20. Delivery and operations

Item	Status	Where / why
Verified on a clean database	**Included**	Fresh install of the three modules on v19_rvk_docs, then all 74 tests.
Verified on install, upgrade and uninstall	**Included**	All three run on 15 Oct 2026, plus a reinstall after uninstall.
Deployment note: what the administrator does after install	**Included**	Installation & Configuration in every README, and chapter 2 of the User Manual.
Backup / restore path understood	**Deferred**	Depends on the client's hosting (to be confirmed with them).
Known limitations documented and communicated	**Included**	Known Limitations in every README; summarised in the Technical Overview.
