Reading guide

Who are you?

You are...	What you do with this module	Read these chapters
Salesperson (group Sales / User)	Prepare quotations and send them by email; see why a quotation cannot leave yet	Overview, Business cycle steps 6 to 9 and 12, Troubleshooting
Finance Manager (group Accounting / Administrator, plus a Sales role)	Approve a payment term that is not the customer's default; set the company's minimum advance for special items	Business cycle steps 1, 2 and 10, Conditional behavior, Troubleshooting
Operations Manager (group Quotation Approval / Quotation Send Approver)	Approve sending a quotation to a customer on the credit watch list	Business cycle step 11, Conditional behavior
Purchaser (group Purchase / User)	See which purchase lines are special items	Business cycle step 13
Implementer / administrator	Configure the company, payment terms, products, customers and user rights	All chapters

How to read this guide

Each step has a screenshot. The red numbers on a screenshot, such as 1, match the numbers in the text. Menu paths look like **Sales › Orders › Quotations**. Every chapter can be read on its own.

The screenshots were taken on 2026-10-15 in a demo database with neutral sample data (customers Demo Customer D and Demo Customer E, products Demo Valve and Demo Special Pump, quotations S00052 to S00055).

Overview

What the module does

Quotation Payment Terms adds four checks to the **Send** button of a quotation. A quotation is sent only when:

1. it has a payment term;
2. if it holds a special item, its payment term asks for at least the company's minimum advance for special items;
3. its payment term is the customer's default term, or the Finance Manager has approved it on the quotation;
4. if the customer is on the credit watch list, the Operations Manager or the Finance Manager has approved sending it.

The checks run in this order and the first one that fails is shown. Each approval records who approved and when. The module also shows the product's Special Item mark on quotation, sales order and purchase order lines.

The problem it solves

Before the module, a salesperson could send a quotation with no payment term, or with a longer term agreed informally with the customer, and Finance found out only when the order came in. Special (made-to-order) items were offered with little or no advance, and quotations went out to customers whose payments were already a concern.

When to use it (and when not to)

Use it when payment terms are a finance decision, not a sales one, and when special items must be secured by an advance.

Know its limits before you rely on it:

- The checks run only when someone presses **Send** on a quotation. **Confirm**, **Print** and **Preview** are not checked by this module, so a quotation can still be confirmed without a payment term or approval (see What this guide does not cover).
- An order that is already confirmed is not checked again when its confirmation email is sent.
- Customers on credit hold or absolute block are not handled here; the Customer Credit Control module handles them.
- The module relies on **Customer Credit Control** for the advance percentage of payment terms, the Special Item mark of products and the customer's credit state. That module is installed automatically.

Business cycle

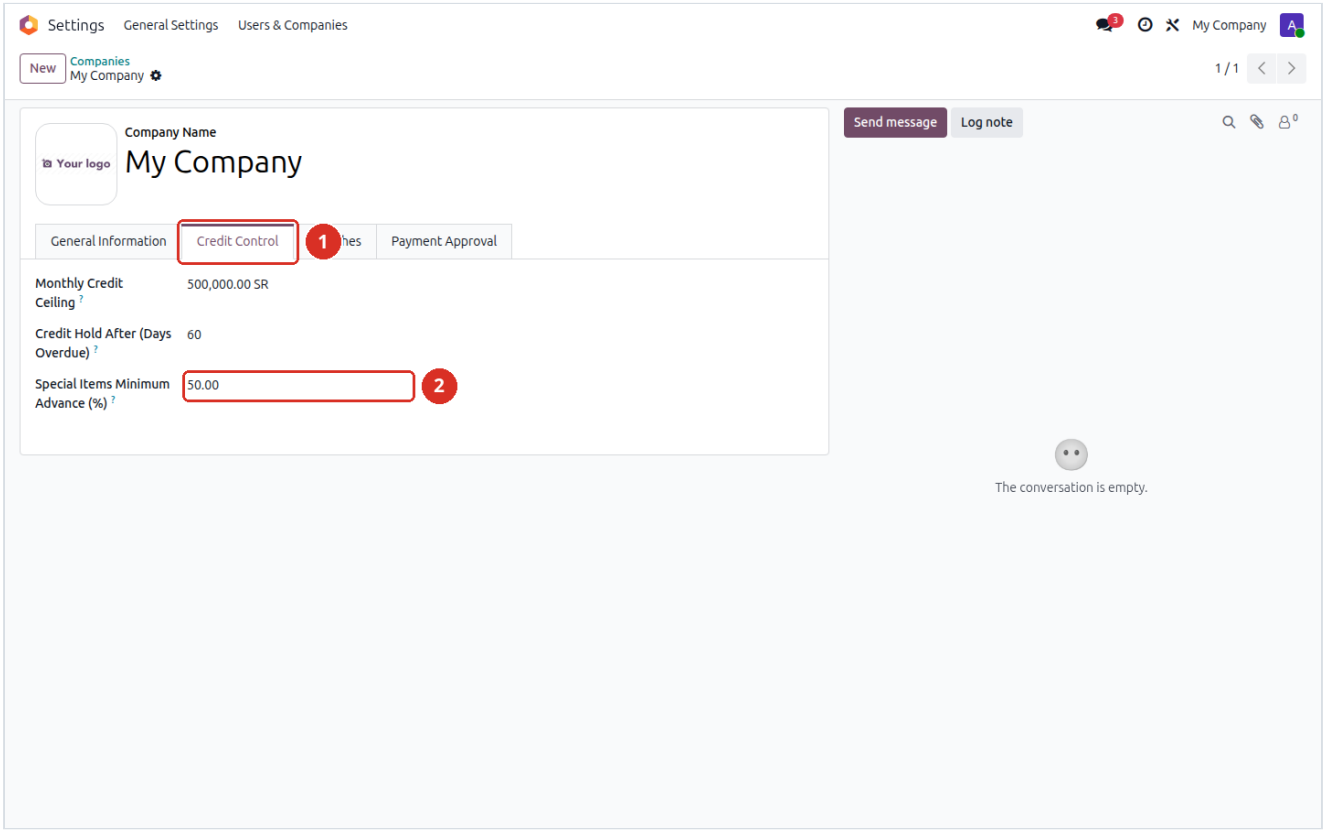

User stories

- As a **Finance Manager**, I want quotations to leave only on payment terms I have agreed to, so that the company does not discover a long credit term after the order is signed.
- As a **Finance Manager**, I want special items to be quoted only with a large enough advance, so that made-to-order goods are not left unpaid.
- As an **Operations Manager**, I want to decide whether a quotation goes to a customer on the watch list, so that risky customers are not encouraged to order.
- As a **Salesperson**, I want to see on the quotation what is missing before I send it, so that I can fix it or ask the right person.

Step 1: Set the minimum advance for special items

Who: Finance Manager. Where: **Settings › Users & Companies › Companies**, open your company.

1. Click the **Credit Control** tab (1). The tab is visible only to users with Accounting / Administrator.
2. Enter the percentage in **Special Items Minimum Advance (%)** (2), for example 50.
3. Save.

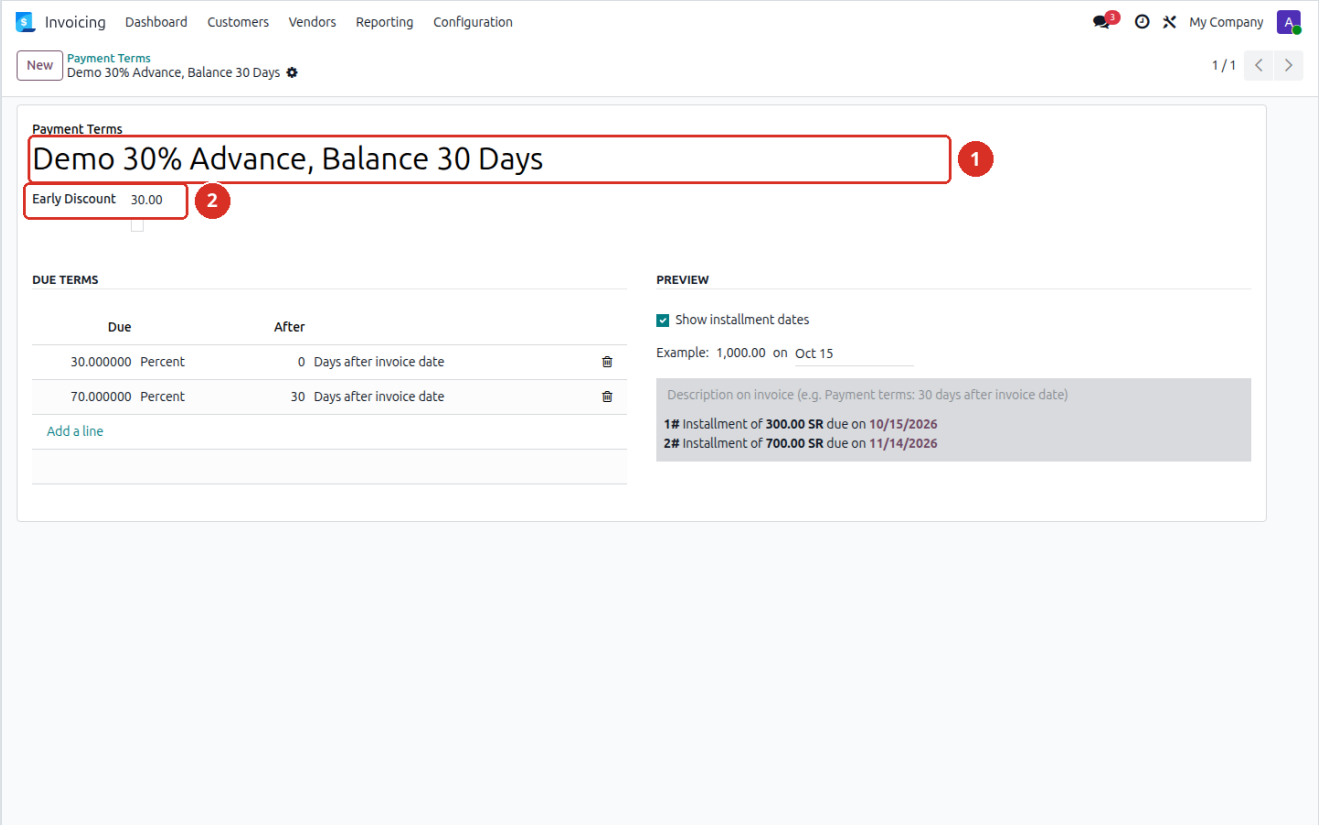

Company form, Credit Control tab (1), with the special-item minimum advance set to 50% (2).

A value of 0 means no minimum: quotations with special items are then not checked for an advance. The value must be between 0 and 100.

Step 2: Give each payment term its advance

Who: Finance Manager. Where: **Invoicing › Configuration › Payment Terms** (the app is called Accounting when Odoo Accounting is installed).

1. Open the payment term 1.
2. Enter the share paid in advance, here 30 2.
3. Save.

Payment term form: the term 1 and its advance of 30.00 2.

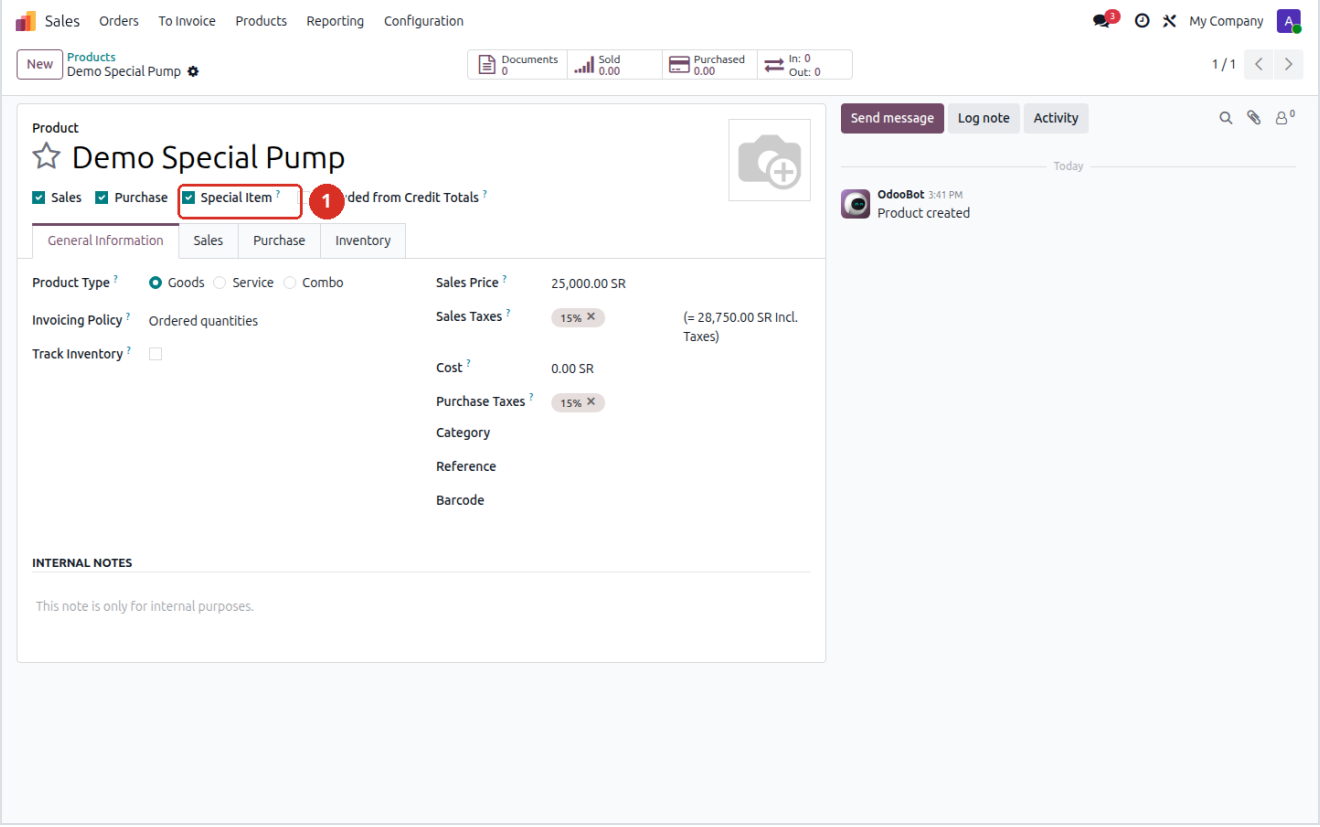

> **Tip:** On this screen the advance value appears next to the label **Early Discount**, with no label of its own 2. The number 30.00 is the **Advance (%)**; the small check box under it is the early discount. This is a layout fault of the Customer Credit Control module (see the technical guide). Do not confuse the two.

The advance you enter is what the module compares with the company minimum. It is not calculated from the due-term lines.

Step 3: Mark special products

Who: Sales or Inventory manager. Where: **Sales › Products › Products**.

1. Open the product.
2. Tick **Special Item** 1 under the product name.
3. Save.

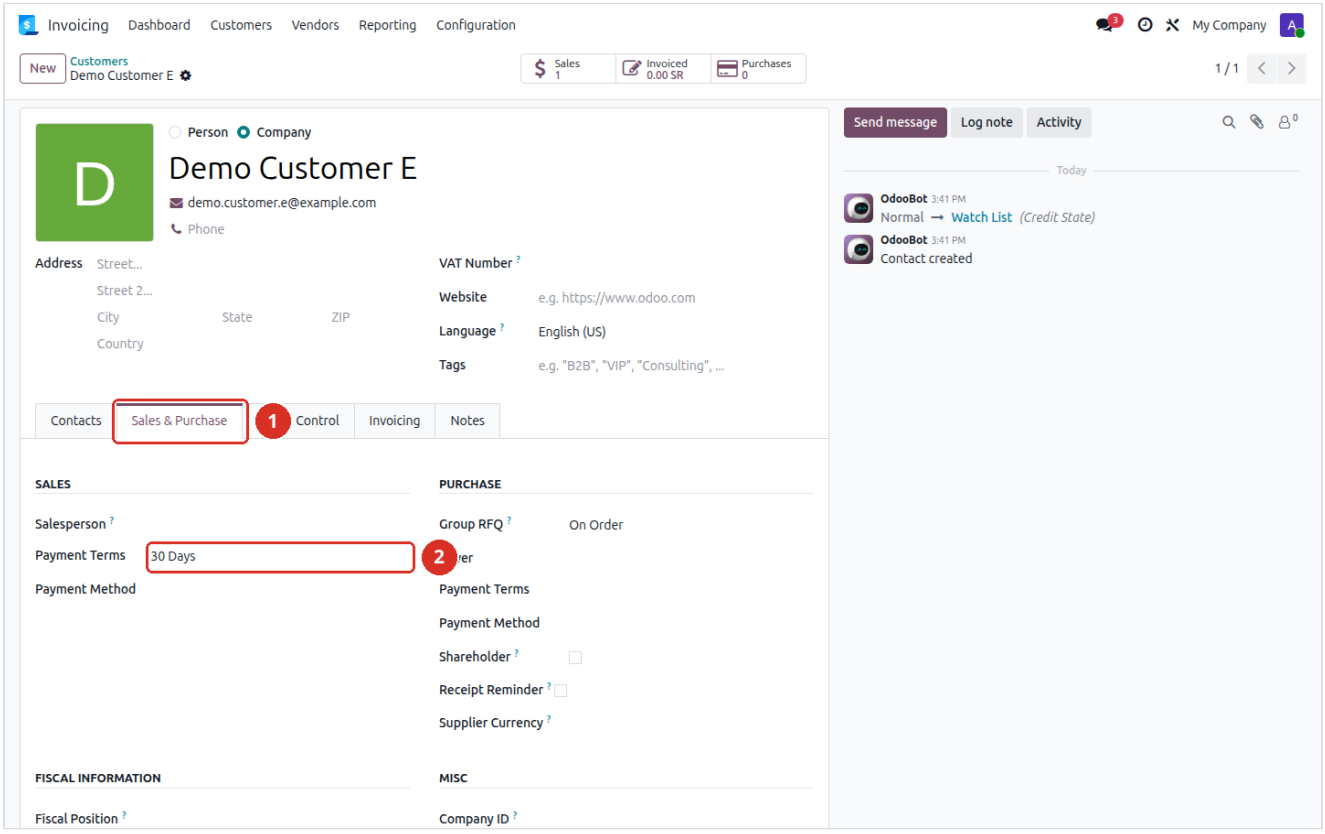

Product form with the Special Item option ticked 1.

Every quotation line, order line and purchase line for this product now shows the mark. The mark is read from the product; it cannot be changed on a line.

Step 4: Set the customer's default payment term

Who: Salesperson or Finance. Where: **Sales › Orders › Customers**, open the customer.

1. Click the **Sales & Purchase** tab 1.
2. Choose the **Payment Terms** 2 agreed with the customer.
3. Save.

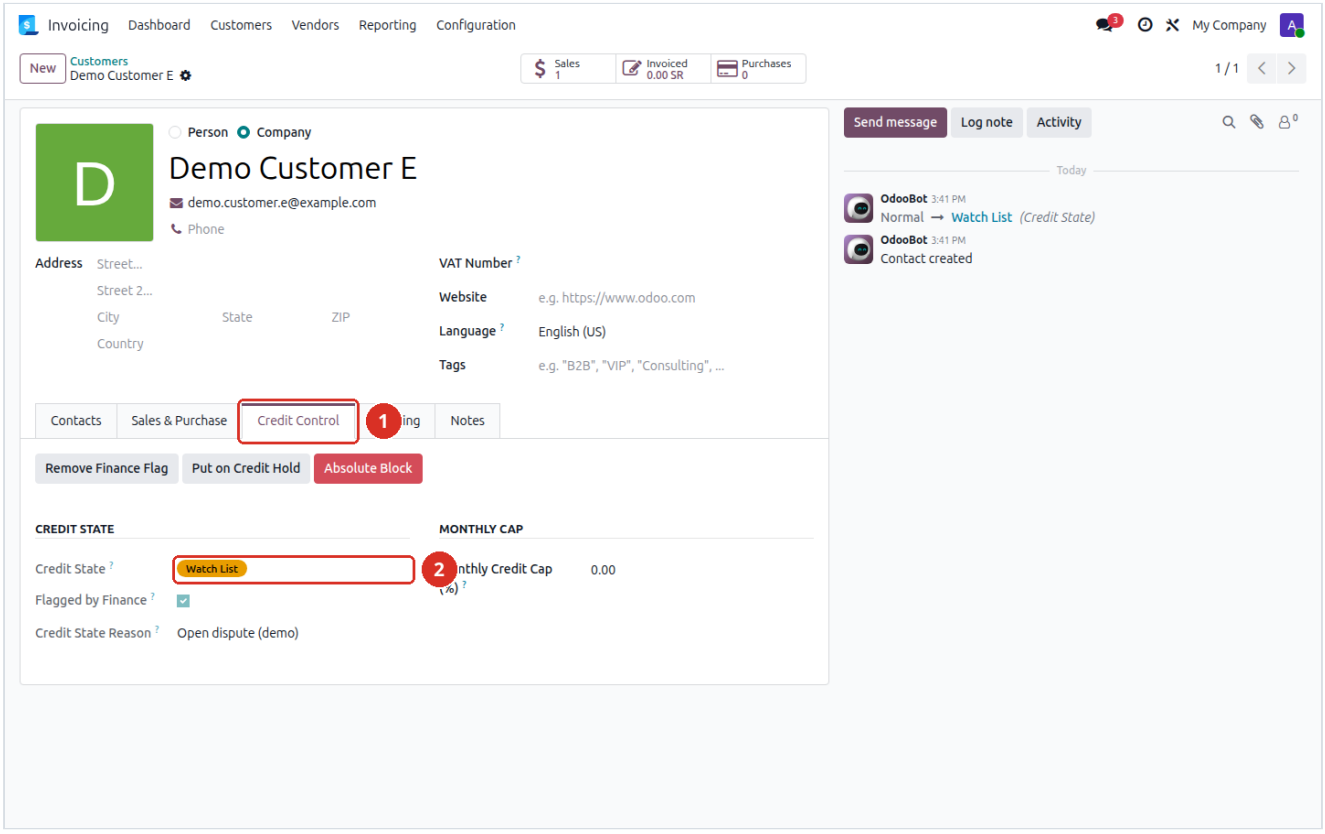

Customer form, Sales & Purchase tab 1, default payment term 30 Days 2.

This default term is "approved by definition": a quotation on it needs no approval. If a customer has **no** default payment term, every term put on its quotations needs the Finance Manager's approval. The demo customer Demo Customer D has no default term, which is why its quotation on 45 Days waits for approval in step 8.

Step 5: Check the customer's credit state and the users' rights

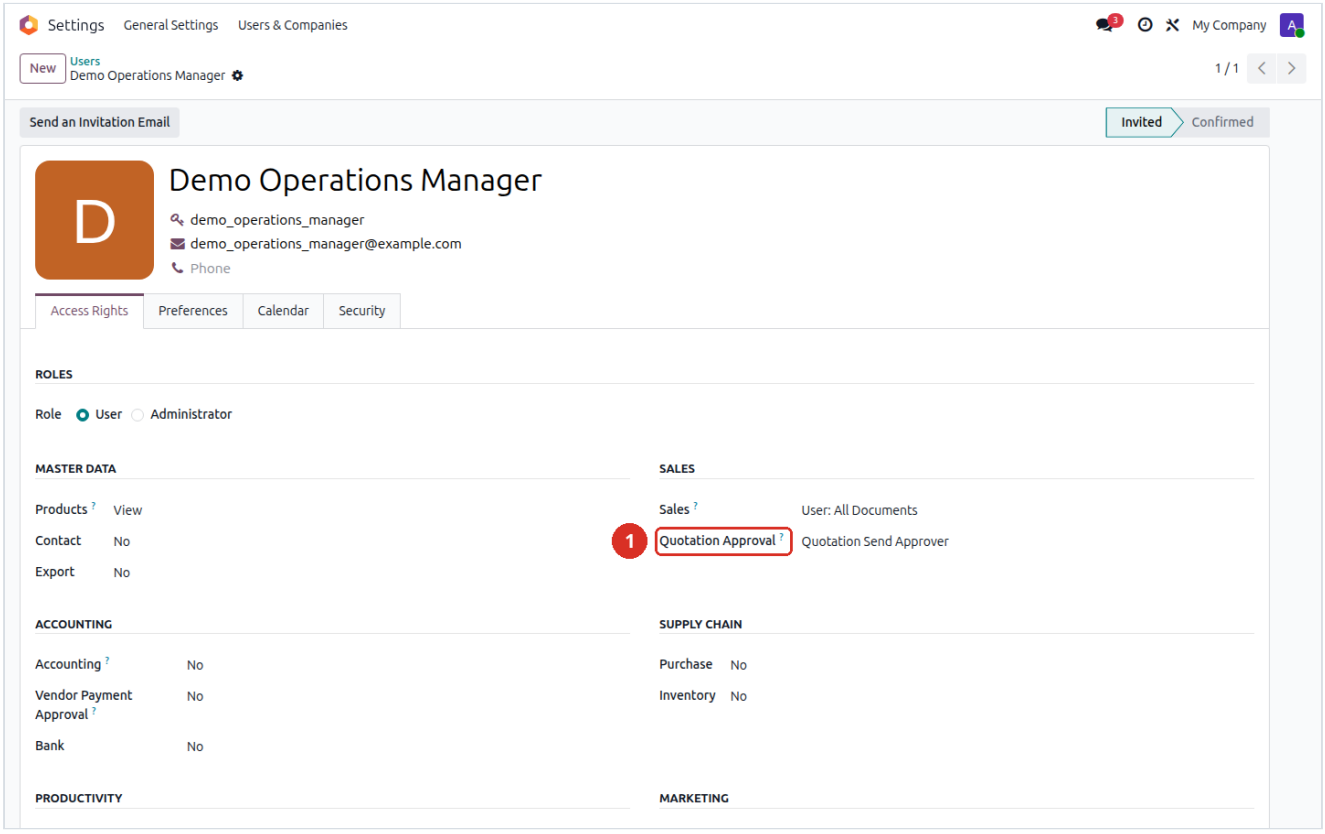

The credit state is managed by the Customer Credit Control module. Open the customer's **Credit Control** tab 1 to see it 2. Only the state Watch List matters to this module.

Customer form, Credit Control tab 1: the customer is on the Watch List 2.

Then give the approvers their rights in **Settings › Users & Companies › Users**:

- Operations Manager: **Quotation Approval** = Quotation Send Approver 1. This also gives the Sales / User right.
- Finance Manager: **Accounting** = Administrator, and also **Quotation Approval** = Quotation Send Approver. Without a Sales role the Finance Manager cannot open quotations (see Troubleshooting).

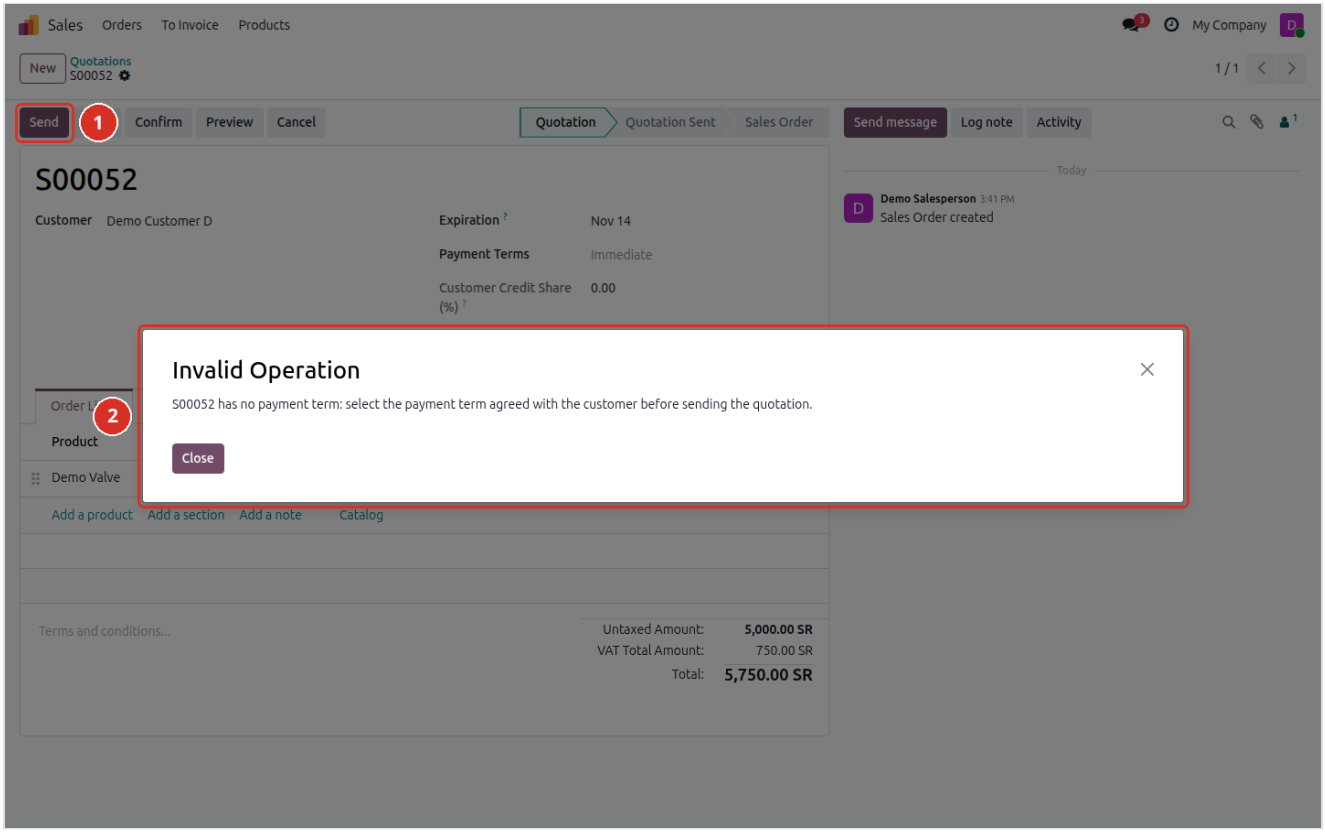

User form: the Quotation Approval right 1 set to Quotation Send Approver.

Step 6: A quotation without a payment term is refused

Who: Salesperson. Where: **Sales › Orders › Quotations**.

1. Open a quotation whose **Payment Terms** is empty.
2. Click **Send** 1.

Odoo refuses and names the missing term 2. Click **Close**, choose the payment term agreed with the customer, and send again.

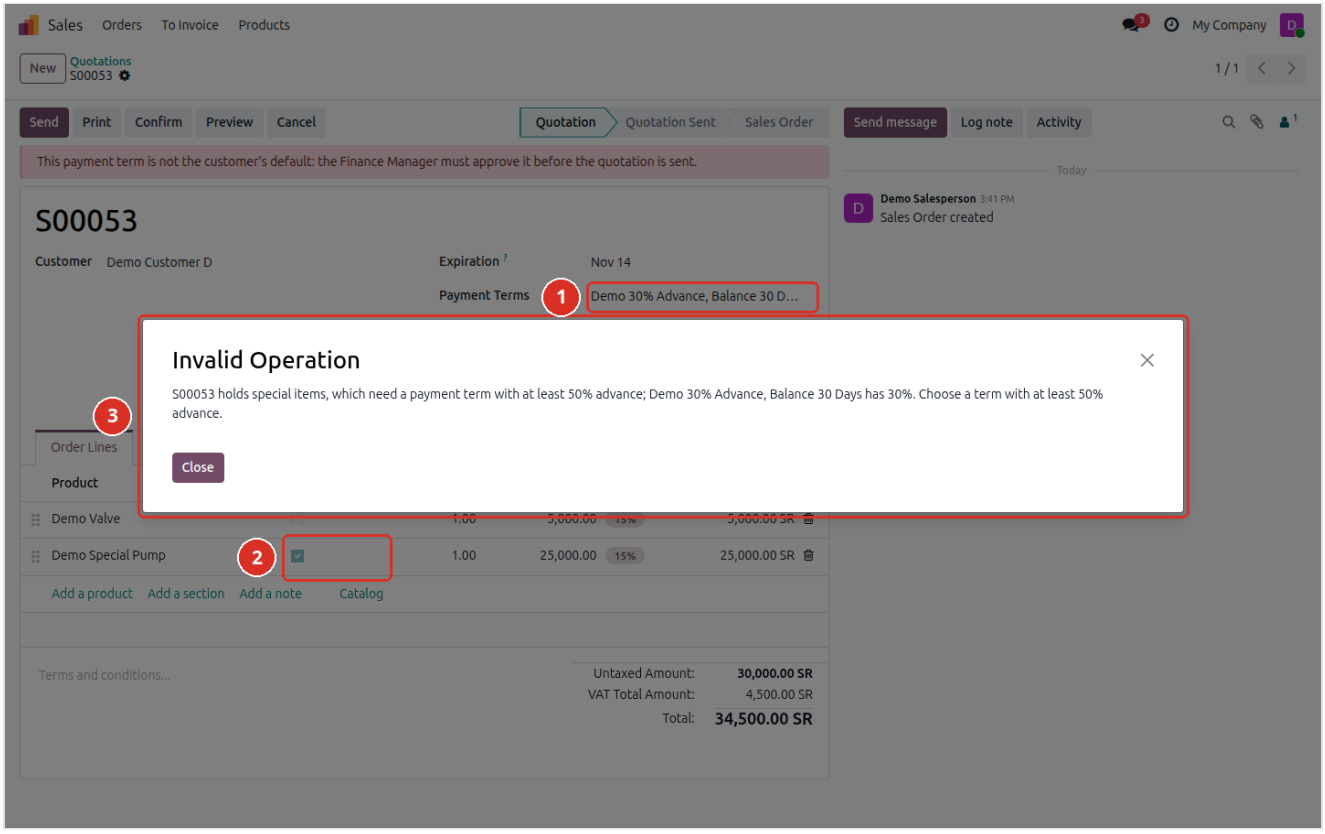

Quotation S00052 without payment term: Send 1 is refused 2.

Step 7: A special item needs the minimum advance

Who: Salesperson.

Quotation S00053 is on Demo 30% Advance, Balance 30 Days 1 and holds the special item Demo Special Pump 2. When you click **Send**, Odoo refuses 3 because the term asks for 30% and the company minimum is 50%.

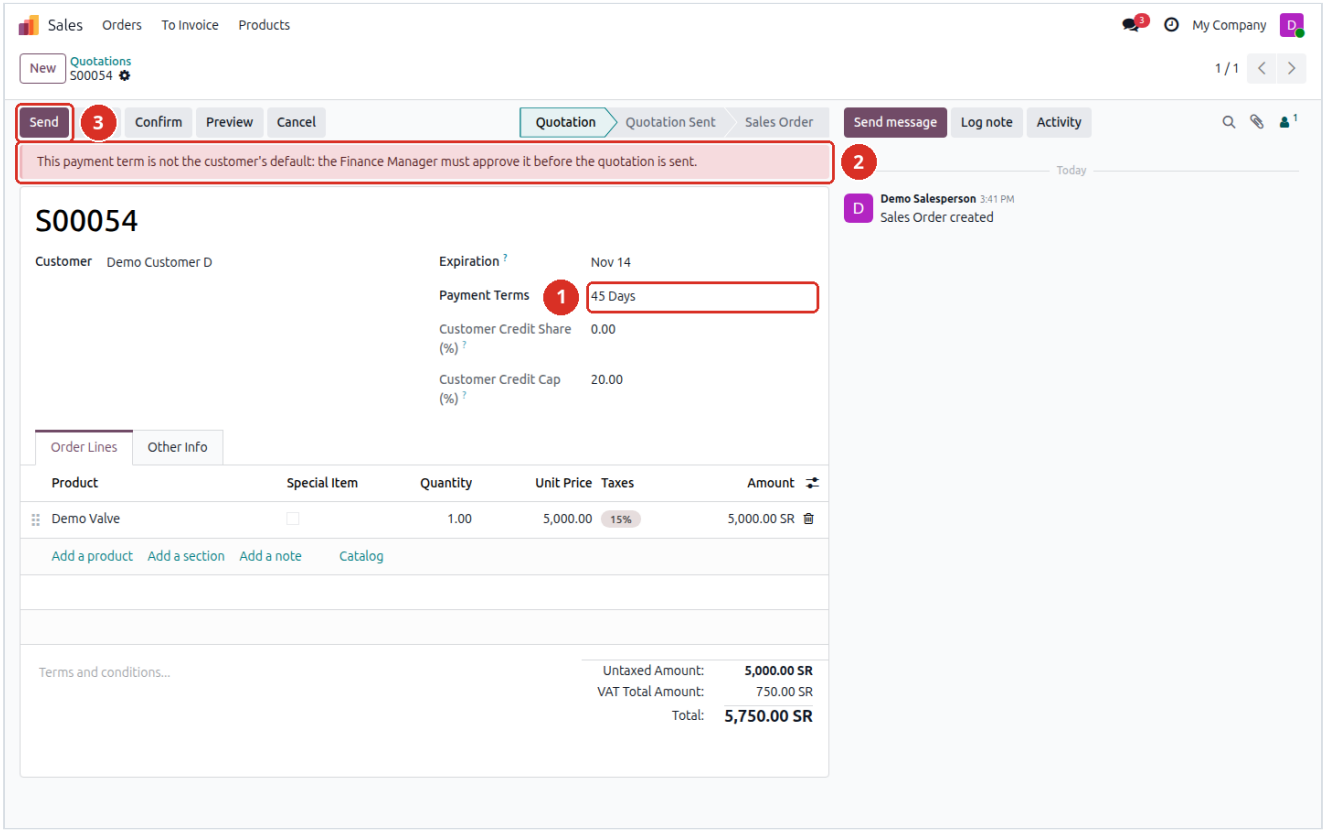

Special item 2 on a 30% advance term 1: sending is refused 3.

How to fix it: choose a payment term whose advance is at least the minimum (a term exactly at the minimum is accepted). A Finance approval of the term does **not** lift this rule. Changing the term then needs the Finance Manager's approval if the new term is not the customer's default.

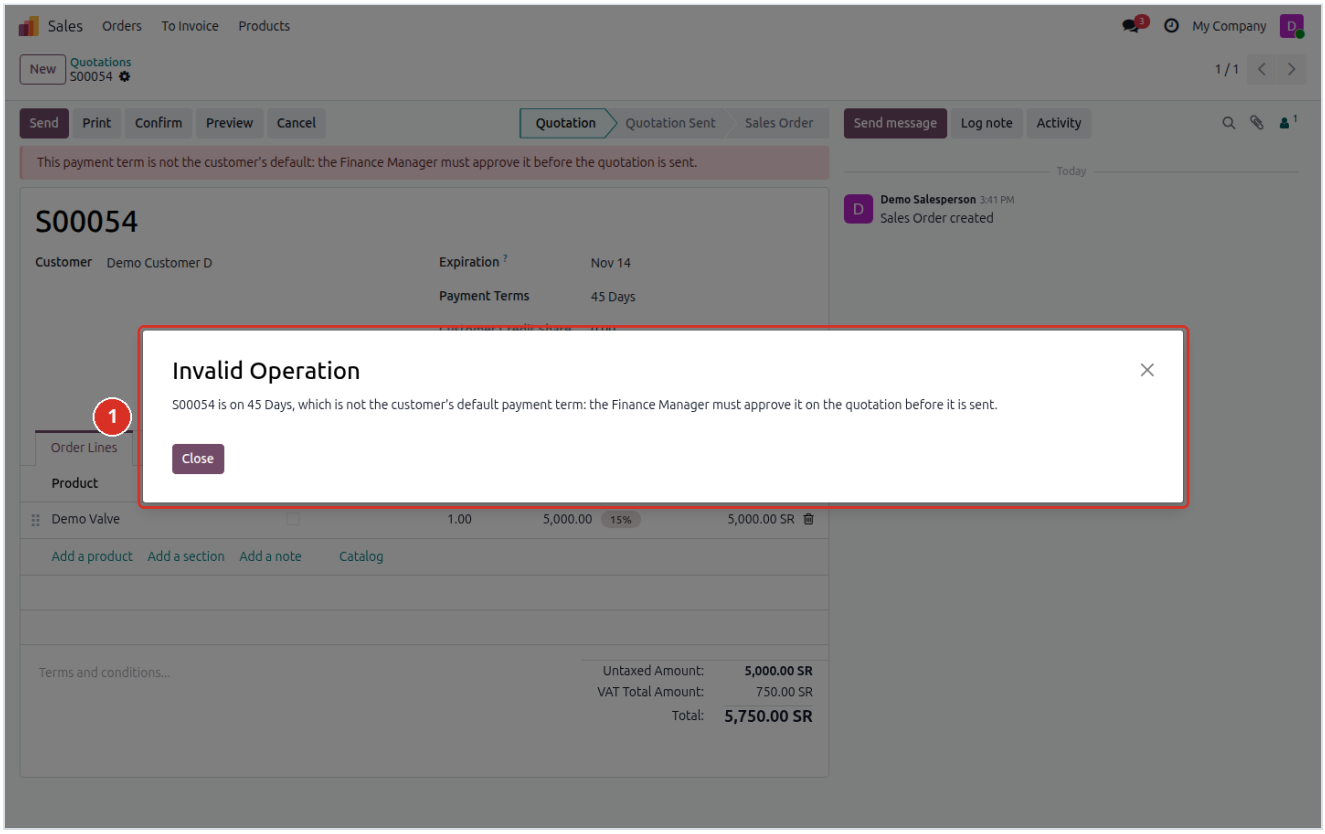

Step 8: A term other than the customer's default waits for Finance

Who: Salesperson.

Quotation S00054 is on 45 Days 1, which is not the customer's default. A red banner 2 says the Finance Manager must approve it. The salesperson does not see an approval button. If you click **Send** 3, Odoo refuses:

The term 1 is not the customer's default: the banner 2 explains why Send 3 will be refused.

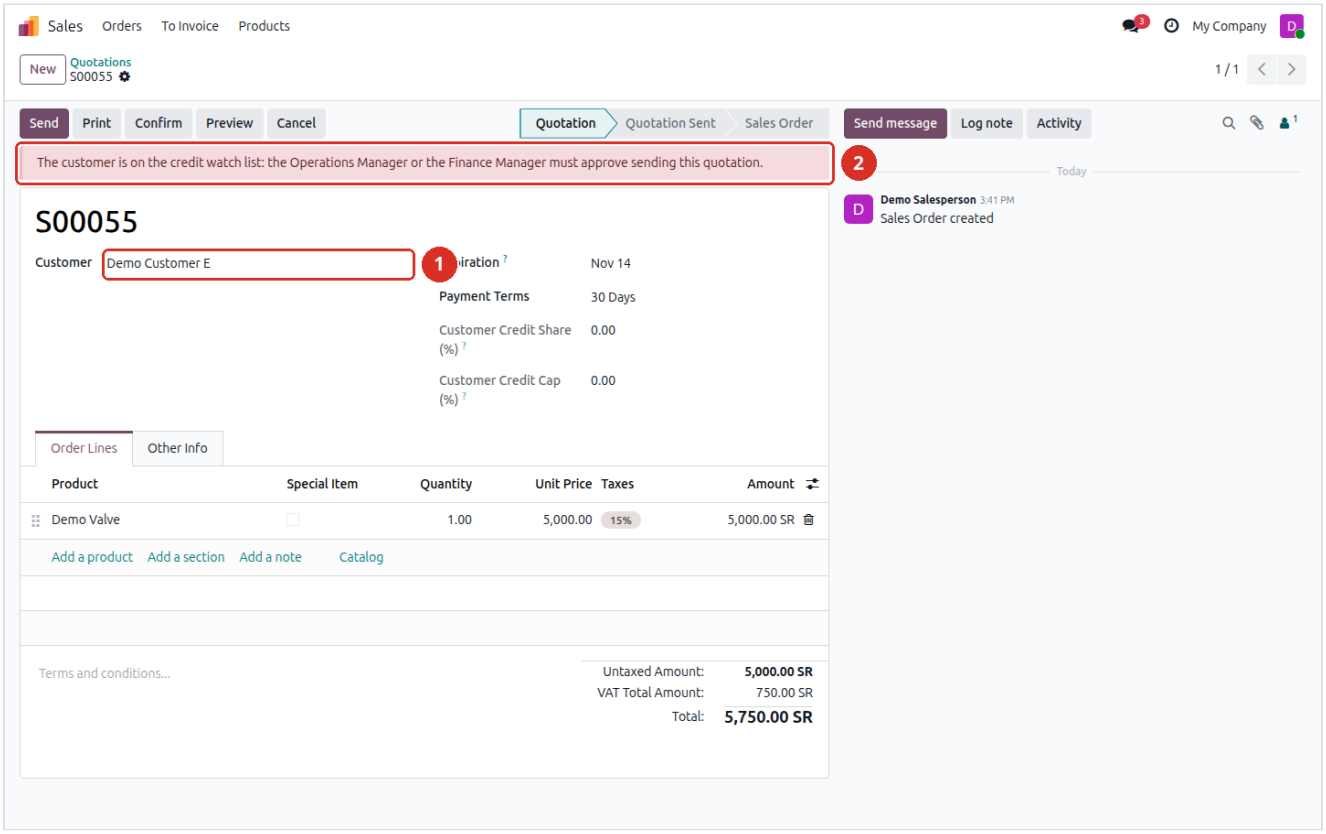

The refusal message 1 when Send is clicked anyway.

Ask the Finance Manager to approve the term (step 10), or put back the customer's default term.

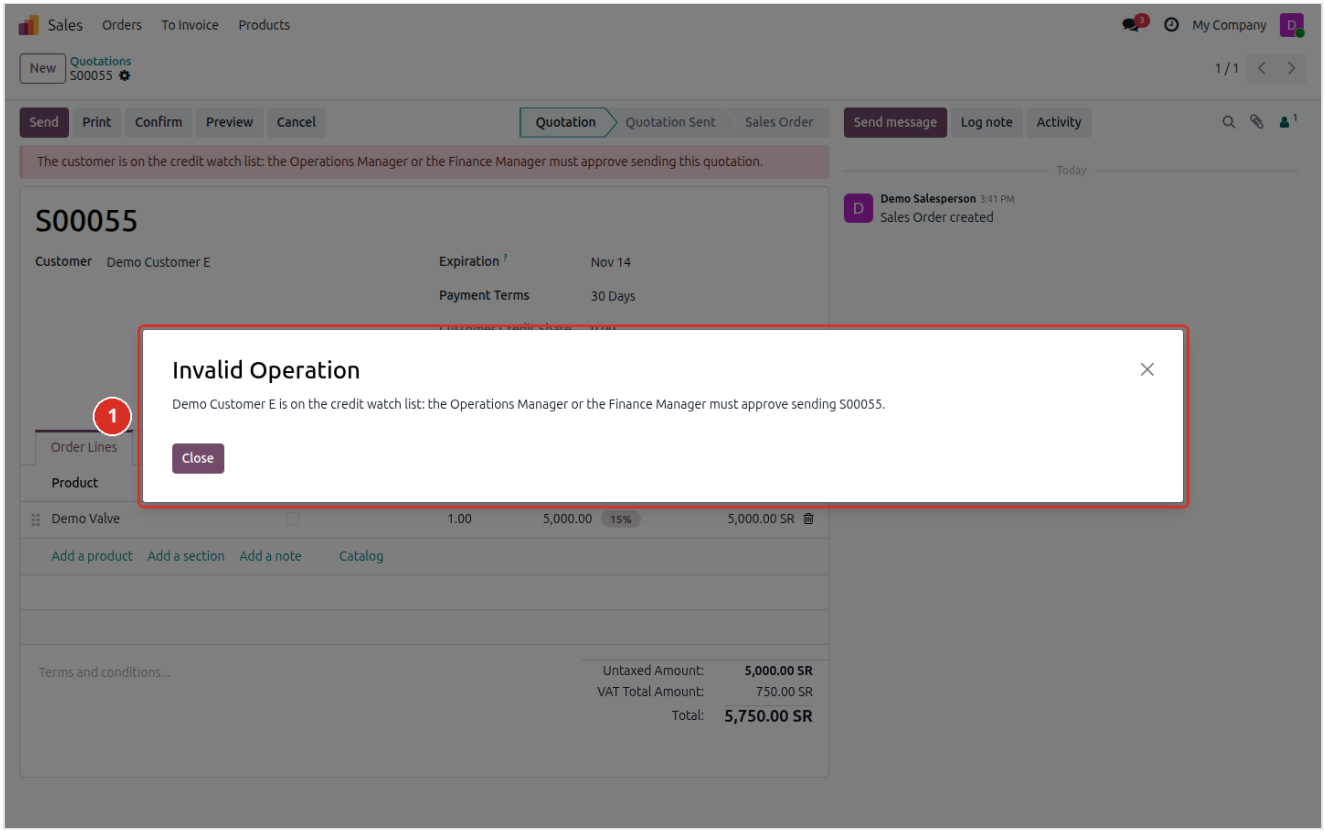

Step 9: A watch-listed customer waits for an approver

Who: Salesperson.

Quotation S00055 is for Demo Customer E (1), who is on the credit watch list. The red banner (2) says the Operations Manager or the Finance Manager must approve sending. If you click **Send** anyway, Odoo refuses, as the second screenshot shows.

Customer on the watch list (1): the banner (2) asks for an approval.

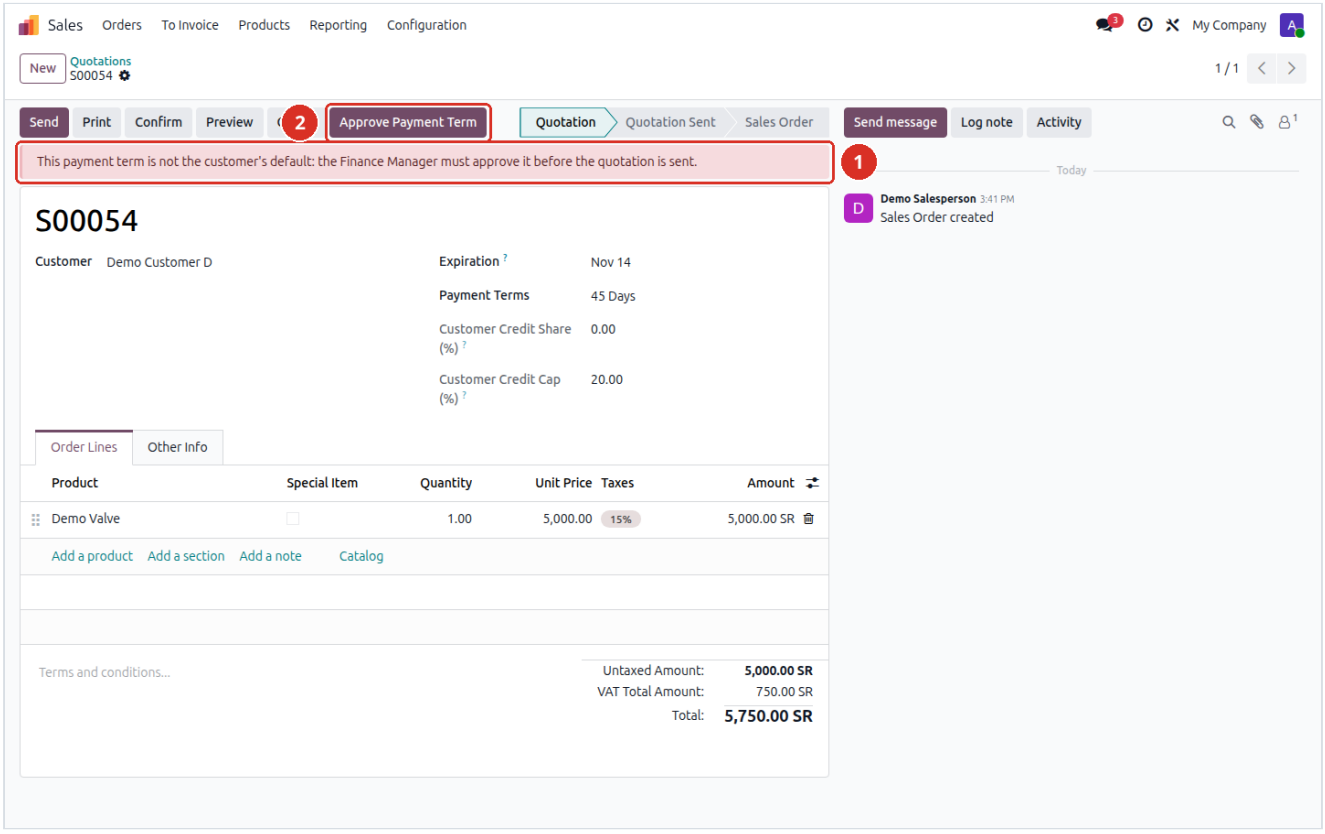

The refusal message 1 for a watch-listed customer.

Step 10: The Finance Manager approves the payment term

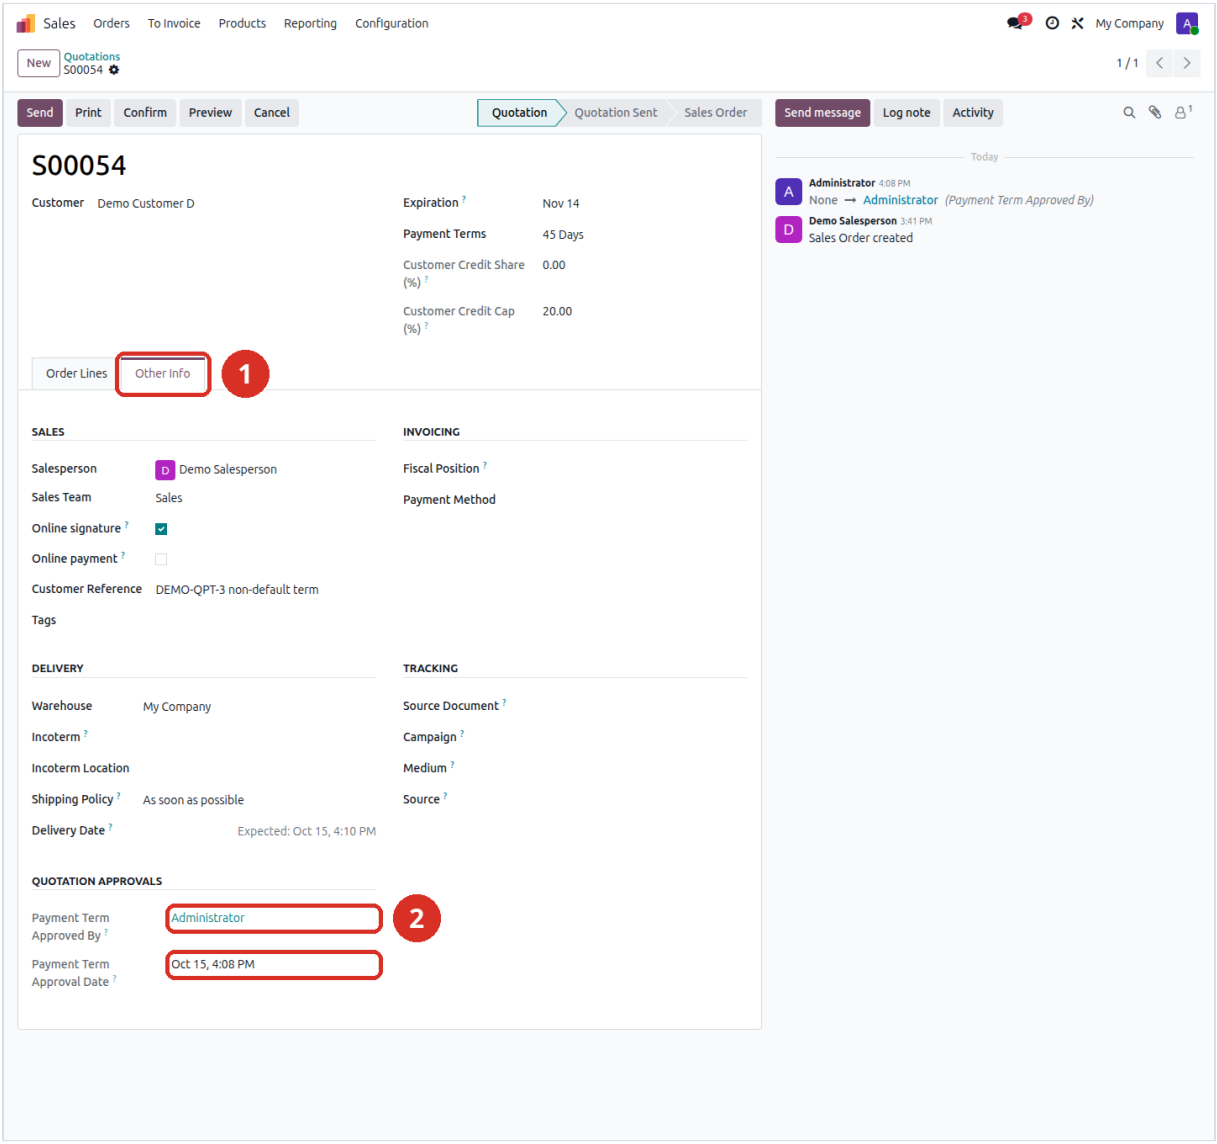

Who: Finance Manager (Accounting / Administrator). Where: open the quotation from **Sales › Orders › Quotations**.

1. Read the banner 1.
2. Click **Approve Payment Term** 2.

The Finance Manager sees the banner 1 and the Approve Payment Term button 2.

The banner and the button disappear. Open the **Other Info** tab 1: the section Quotation Approvals shows **Payment Term Approved By** 2 and the approval date next to it. The chatter (the message history on the right) also records the approval.

Other Info tab 1: who approved the term 2 and when.

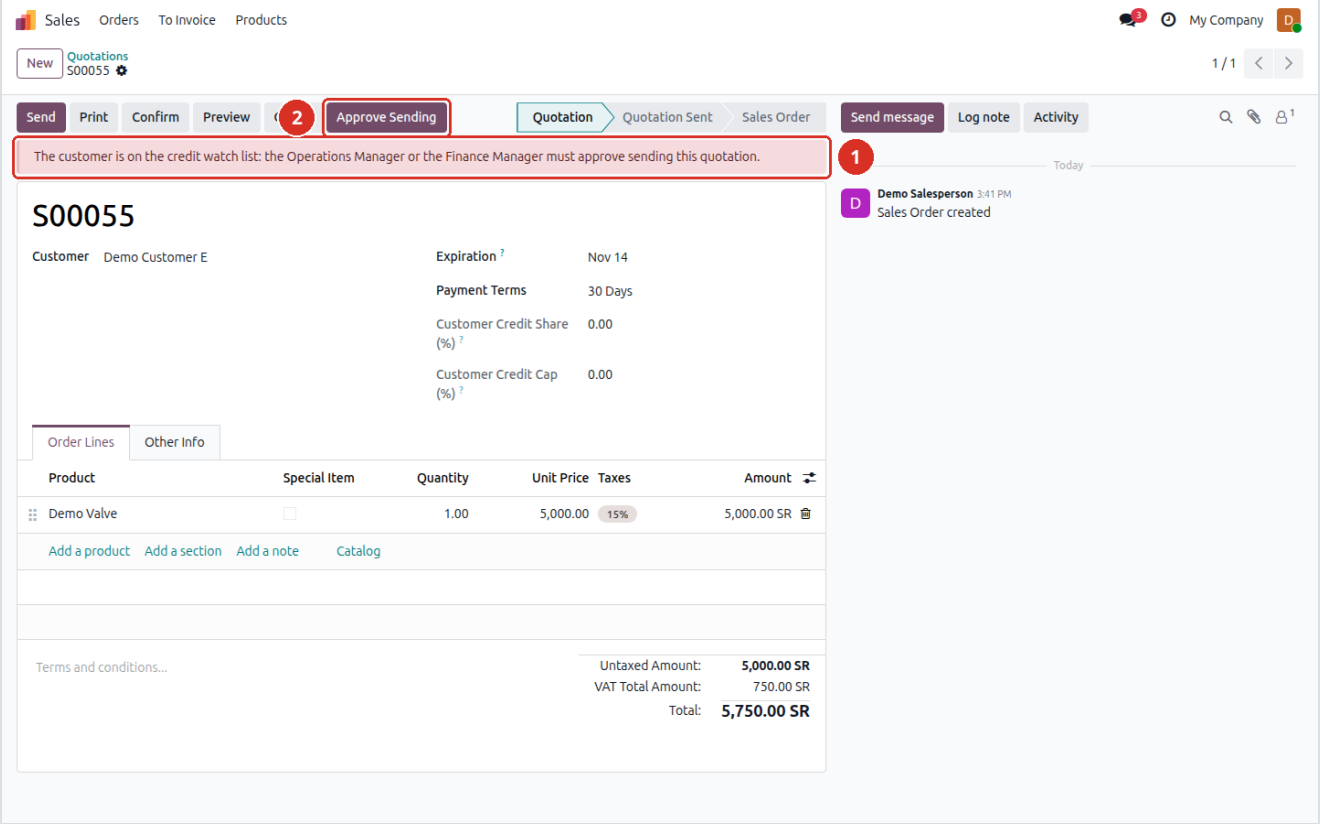

This screenshot was taken with the administrator account, which holds Accounting / Administrator; that is why the approver shows as Administrator.

The approval is cancelled automatically if someone later changes the payment term or the customer of the quotation. The term then needs a new approval.

Step 11: The Operations Manager approves sending

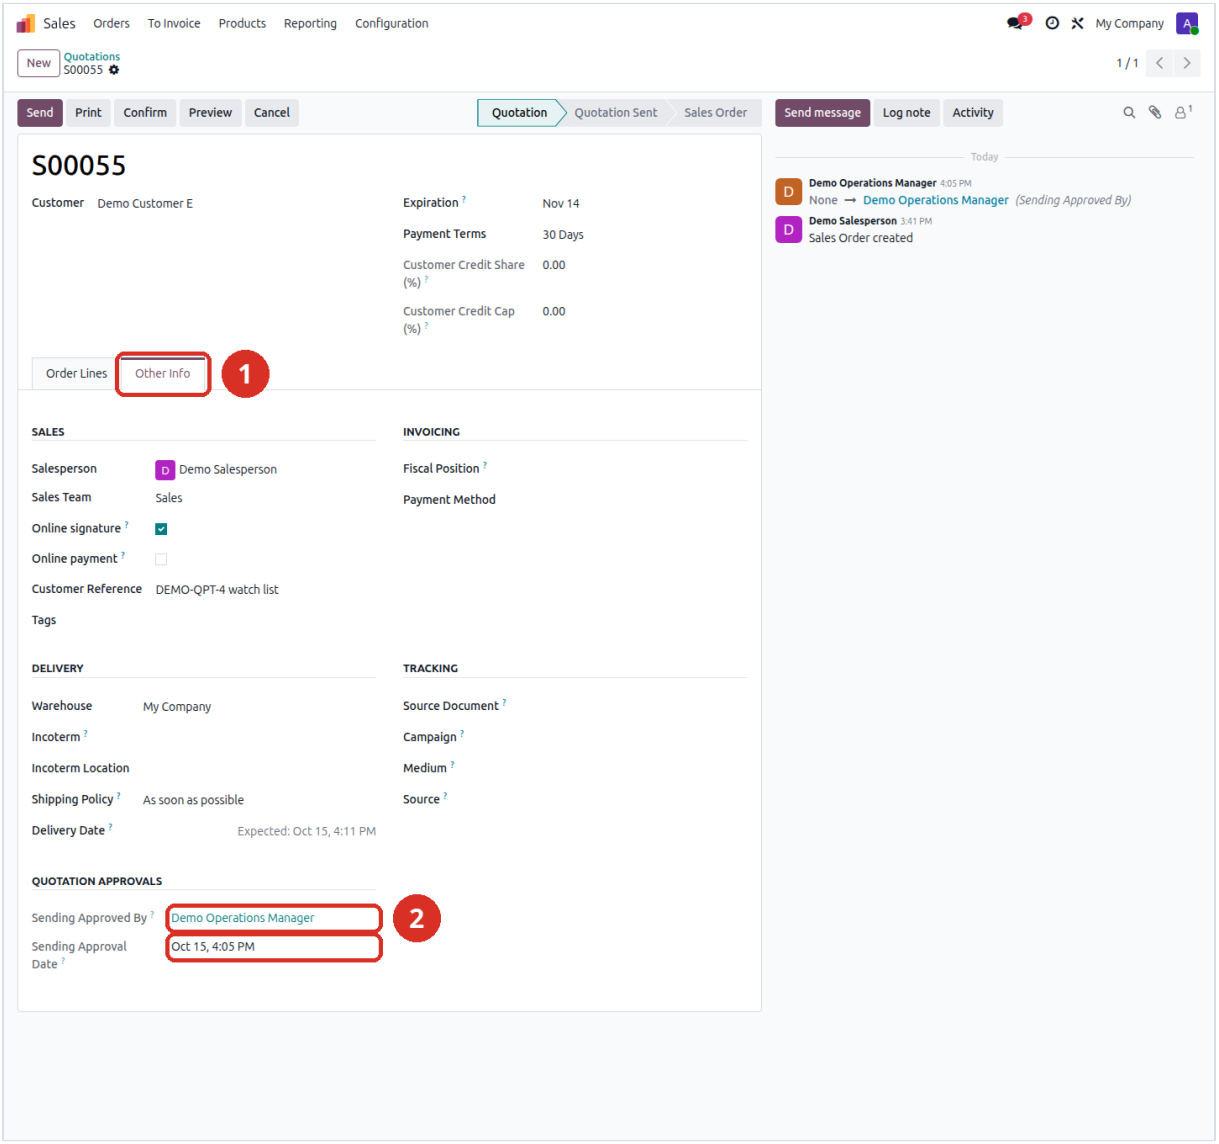

Who: Operations Manager or Finance Manager (Quotation Send Approver).

1. Open the quotation; the banner 1 is shown.
2. Click **Approve Sending** 2.

The approver sees the banner 1 and the Approve Sending button 2.

The banner disappears. The **Other Info** tab 1 shows **Sending Approved By** 2 and the date.

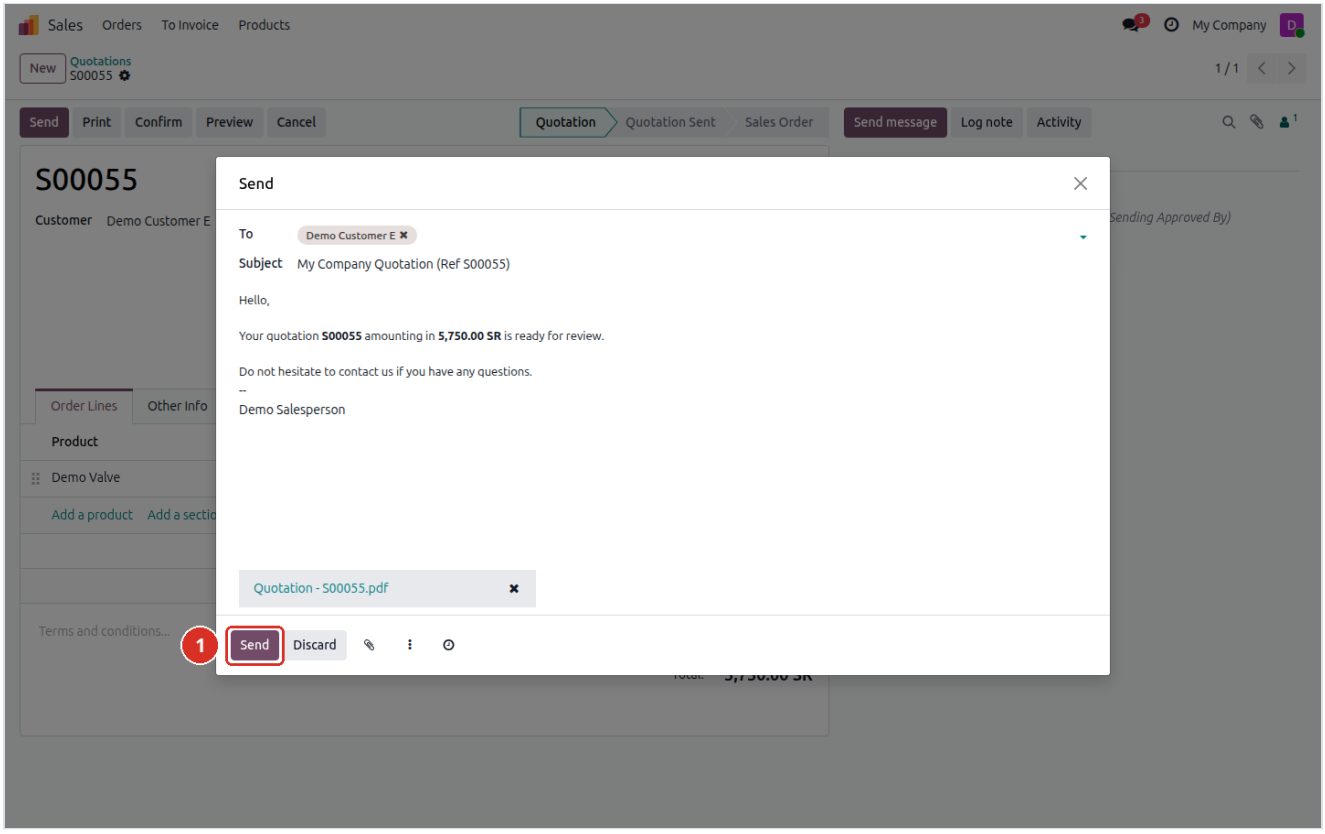

Other Info tab 1: who approved sending 2 and when.

The sending approval is cancelled if the customer of the quotation is changed. The Sales Manager cannot give either approval unless he also holds the right group.

Step 12: The salesperson sends the quotation

Who: Salesperson.

When every check passes, **Send** opens the standard email window with the quotation PDF attached. Check the text and click **Send** 1.

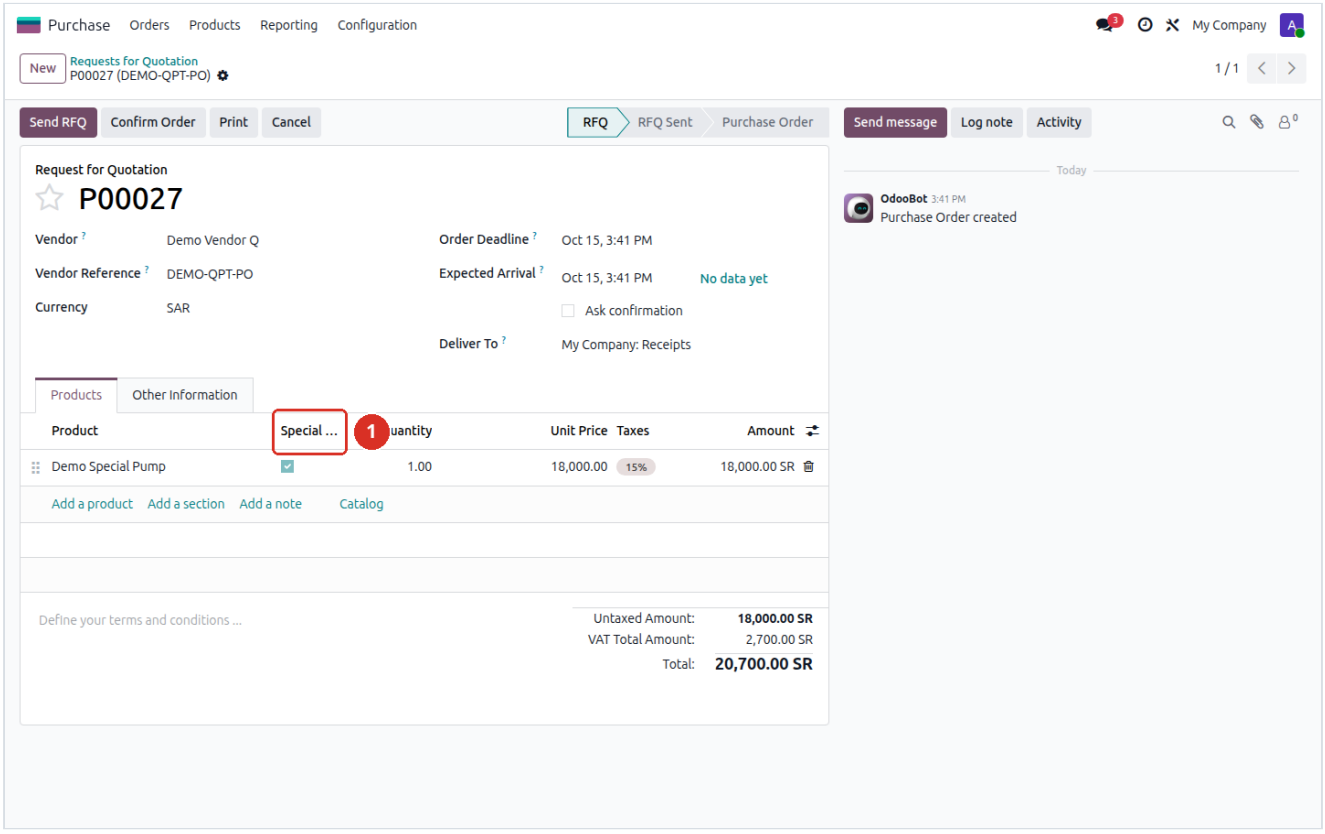

All checks passed: the standard email window opens; click Send 1.

From here Odoo behaves as standard: the quotation moves to Quotation Sent. (In the demo the email was not actually sent; the move to Quotation Sent is confirmed by the module's automated tests.)

Step 13: The special mark follows the purchase

Who: Purchaser. Where: **Purchase › Orders › Requests for Quotation**.

A purchase line for a special product shows a ticked **Special Item** column 1, so the buyer knows the item is made to order.

Request for quotation: the Special Item column 1 is ticked for Demo Special Pump.

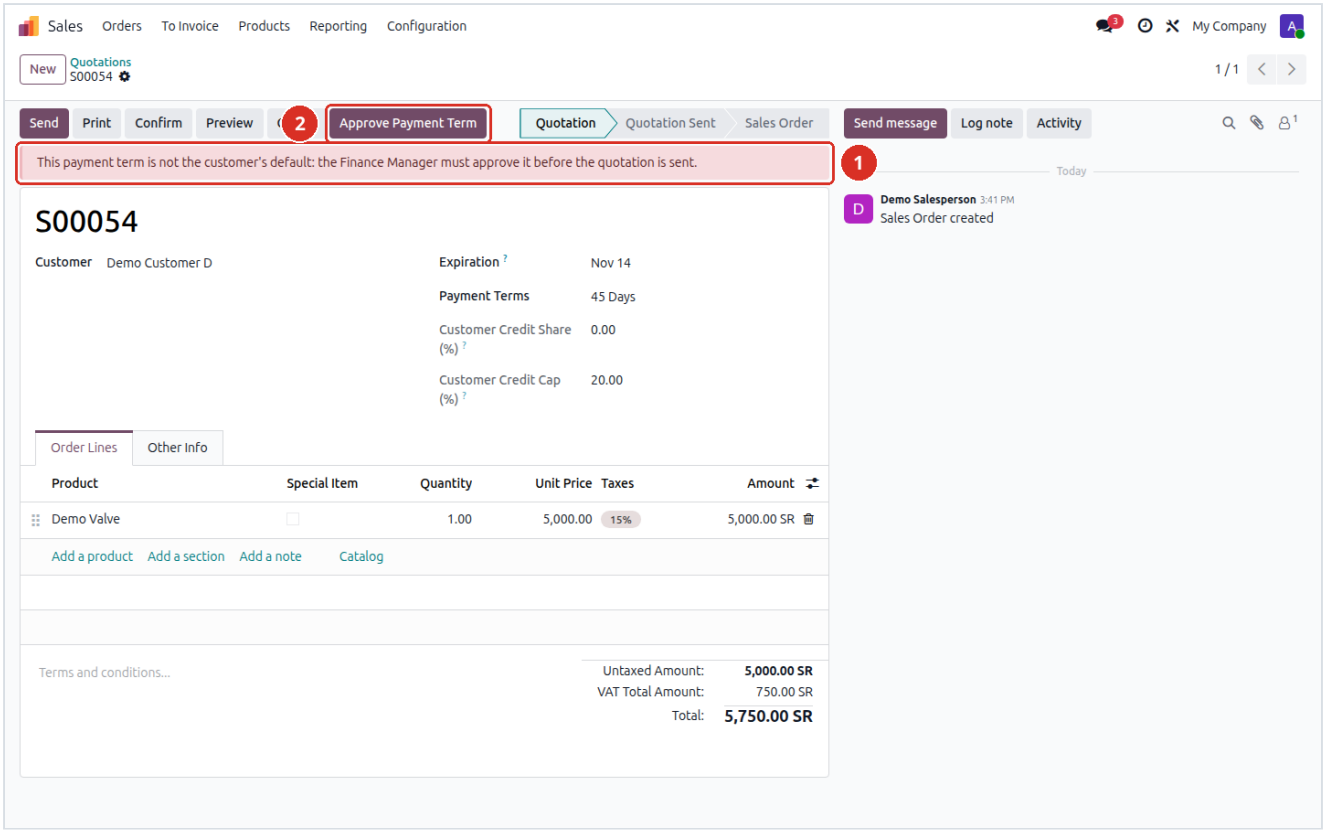

The column is optional: it can be hidden or shown from the column selector at the right end of the line header, on quotations and on purchase orders.

Conditional behavior

The payment term is not the customer's default

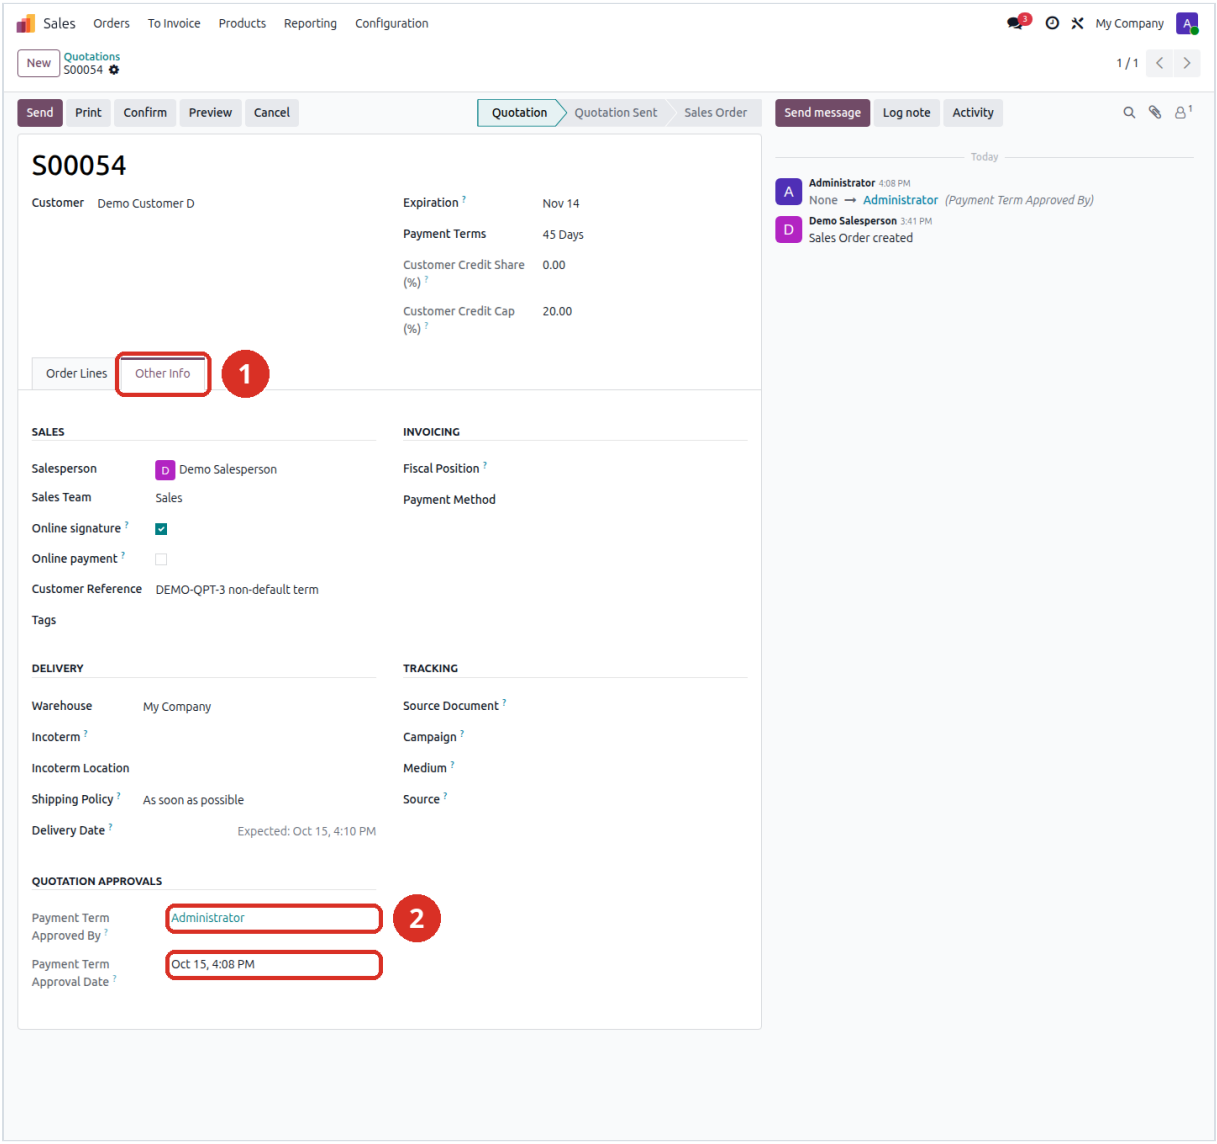

The banner This payment term is not the customer's default... and the **Approve Payment Term** button appear only while the quotation (status Quotation or Quotation Sent) is on a term other than the customer's default and nobody has approved it. The button is visible only to Accounting / Administrator users.

When approval is needed: banner and button are shown (for a salesperson only the banner, see step 8).

Approval needed: banner 1 and button 2.

When the term is approved (or is the default): no banner and no button; the approval is listed in **Other Info** 1 2.

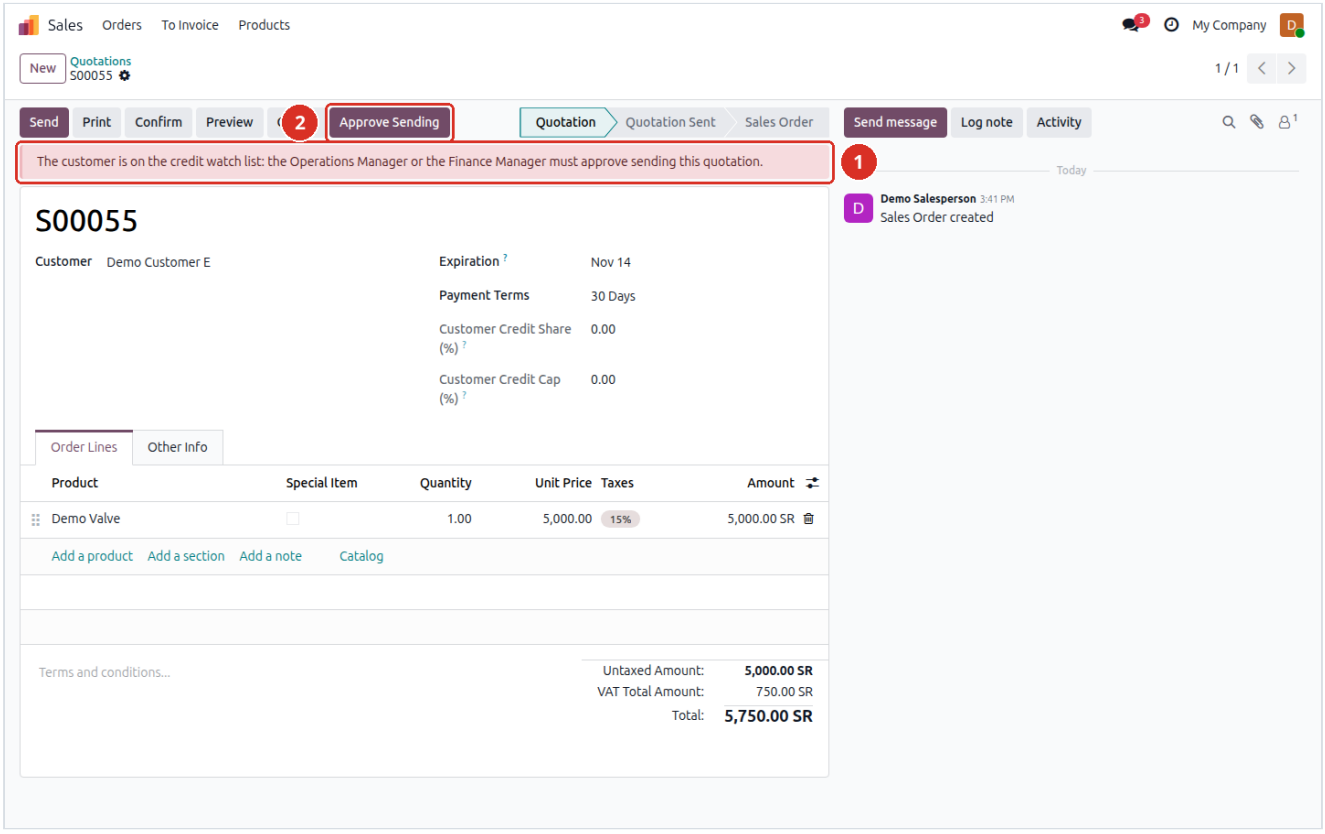

Approved: the banner is gone and the approval is recorded 2.

The customer is on the credit watch list

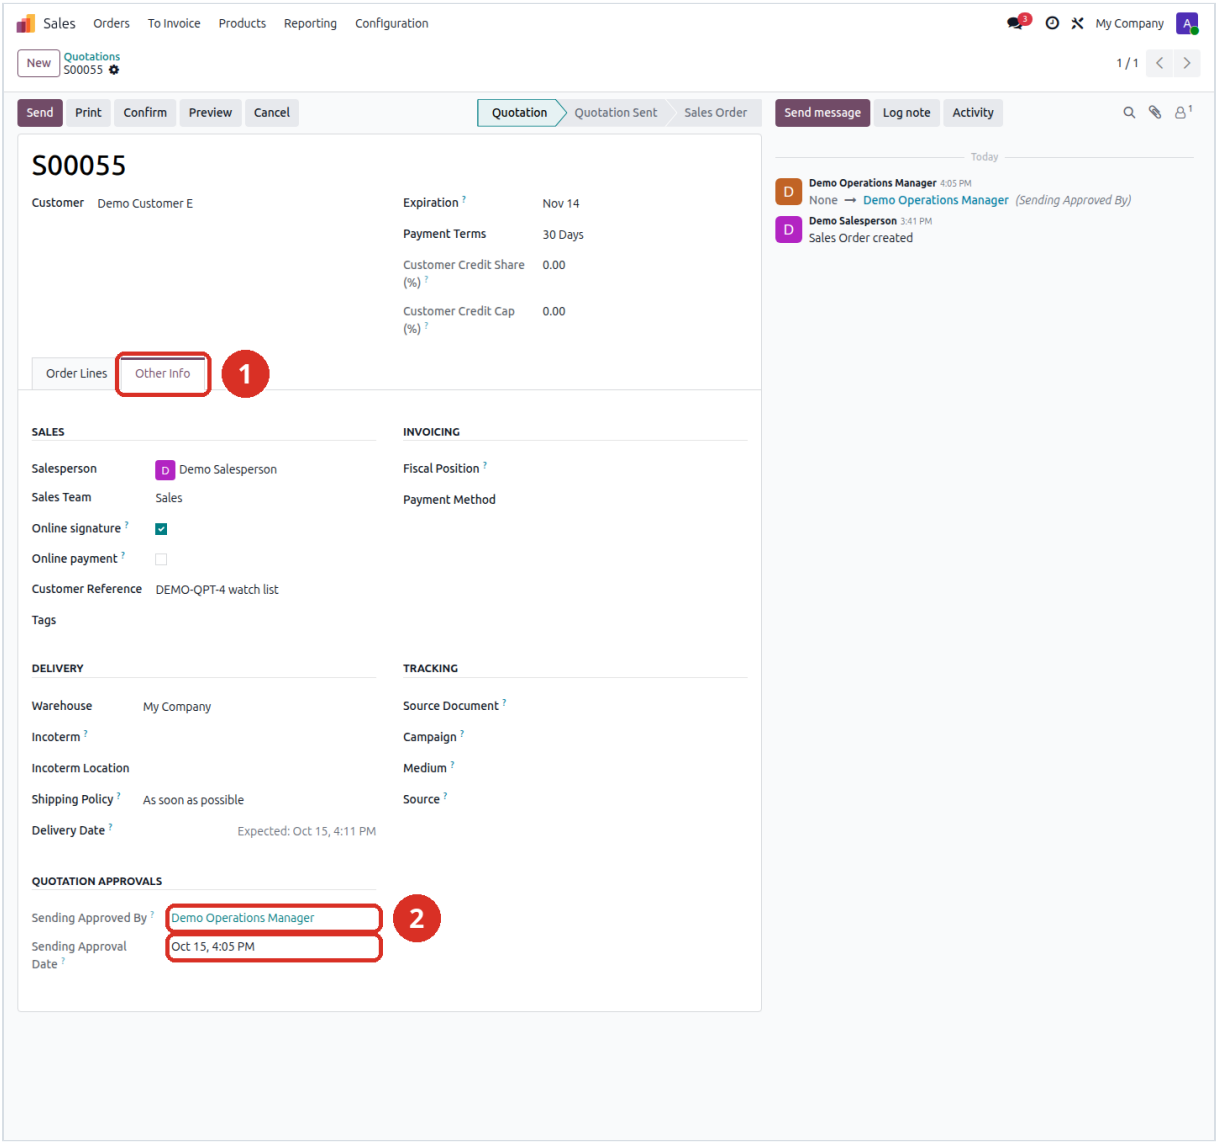

The banner The customer is on the credit watch list... and the **Approve Sending** button appear only while the customer's credit state is Watch List and sending has not been approved. The button is visible only to Quotation Send Approver users.

When approval is needed:

Watch-listed customer, not approved: banner 1 and Approve Sending 2.

When sending is approved:

Approved: the banner is gone; the approver 2 and date are shown in Other Info 1.

The Quotation Approvals section

The section Quotation Approvals in the **Other Info** tab is shown only once at least one approval exists, and each line only for the approval that was given. Before any approval the section is simply absent (no screenshot of the empty state was taken).

Special Items Minimum Advance set to 0

With a minimum of 0 the special-item check is switched off; with any other value it applies to every quotation holding at least one special line. This behaviour comes from the code; only the 50% case was shown on screen (step 7).

Troubleshooting

"S00052 has no payment term: select the payment term agreed with the customer before sending the quotation."

What happened: you clicked **Send** on a quotation with an empty **Payment Terms** field.

How to fix it:

1. Close the message.
2. Choose the payment term agreed with the customer.
3. Click **Send** again. If the term is not the customer's default, ask the Finance Manager to approve it first.

"S00053 holds special items, which need a payment term with at least 50% advance; … has 30%. Choose a term with at least 50% advance."

What happened: the quotation has a product marked Special Item and its payment term's advance is below the company minimum.

How to fix it:

1. Choose a payment term whose **Advance (%)** is at least the minimum named in the message.
2. If no such term exists, ask Finance to create one (**Invoicing › Configuration › Payment Terms**).
3. Have the new term approved if it is not the customer's default, then send.

"S00054 is on 45 Days, which is not the customer's default payment term: the Finance Manager must approve it on the quotation before it is sent."

What happened: the quotation uses a term other than the customer's default (or the customer has no default term at all), and it has not been approved, or the approval was cancelled because the term or the customer changed.

How to fix it:

1. Either put back the customer's default term,
2. or ask a user with Accounting / Administrator to click **Approve Payment Term** on the quotation.

"Demo Customer E is on the credit watch list: the Operations Manager or the Finance Manager must approve sending S00055."

What happened: the customer's credit state is Watch List.

How to fix it: ask a Quotation Send Approver (Operations Manager or Finance Manager) to click **Approve Sending** on the quotation. Changing the customer of the quotation cancels this approval.

"The special items minimum advance is between 0 and 100%."

What happened: a value below 0 or above 100 was typed in **Special Items Minimum Advance (%)** on the company.

How to fix it: enter a value from 0 to 100 and save.

The Finance Manager gets "Access Error … Quotation Spreadsheet … Sales/User: Own Documents Only" when opening quotations

What happened: the user holds Accounting / Administrator but no Sales right, so Odoo does not let him open quotations and he never sees the **Approve Payment Term** button. This was observed in the demo database with a user holding only Accounting rights.

How to fix it: the administrator gives the Finance Manager **Quotation Approval** = Quotation Send Approver (which includes Sales / User), as the module's installation notes recommend.

What this guide does not cover

- **Confirm without sending:** the module checks only the **Send** button. Pressing **Confirm** on a quotation is not checked by this module, so a quotation without a payment term, with an unapproved term or with a special item below the minimum advance can still be confirmed (from the code: `models/sale_order.py` overrides only `action_quotation_send`). Agree with Finance on a working rule, or ask for an extension.
- **Print, Preview and the customer portal link** are not checked either.
- **The actual email was not sent** in the demo (step 12): the screenshots stop at the email window. The change to Quotation Sent is covered by the automated tests, not by a screenshot.
- **The Finance Manager's own screens:** the payment-term approval was captured with the administrator account, because the demo Finance Manager user had no Sales right (see Troubleshooting).
- **The empty state of Quotation Approvals** and the 0% minimum were not captured on screen.
